ZWEIERLEI MASS

WERTE IN DER MENSCH-MASCHINE INTERAKTION

1. September 2026
HSLU Luzern

Prof. Dr. Markus Kneer
Universität Graz

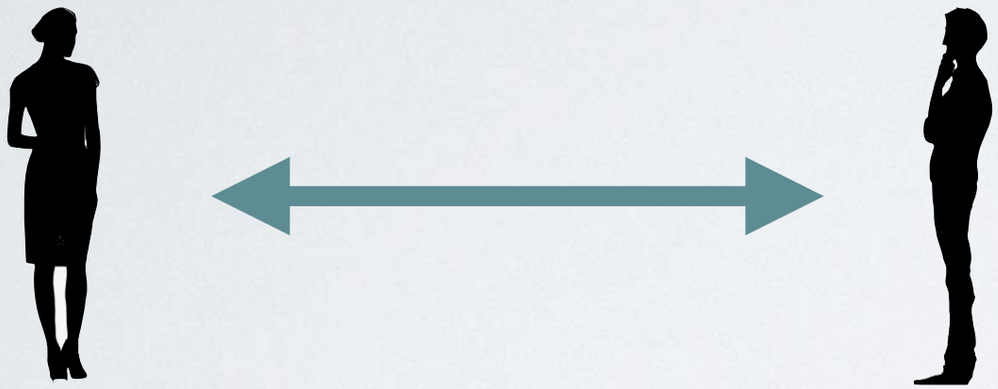

DER VORTRAG

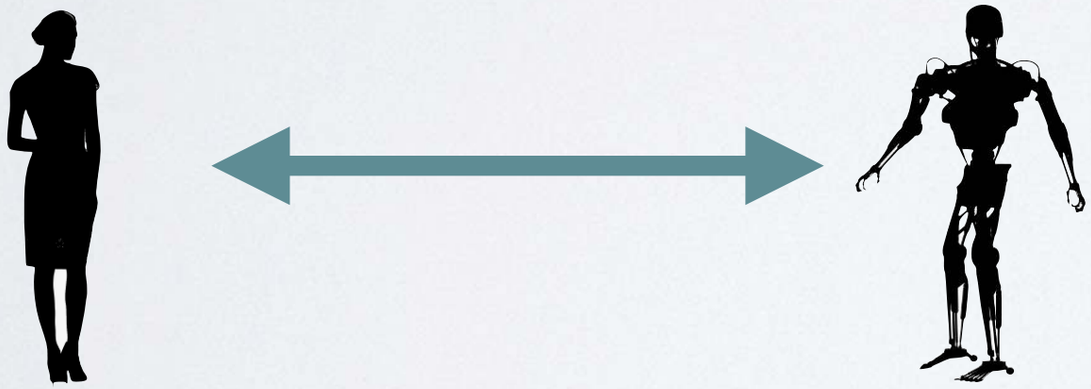

1. Moralische Werte in der Mensch-Maschine Interaktion
2. Ästhetische Werte in der Mensch-Maschine Interaktion

VALUE ALIGNMENT

WERTEANGLEICHUNG

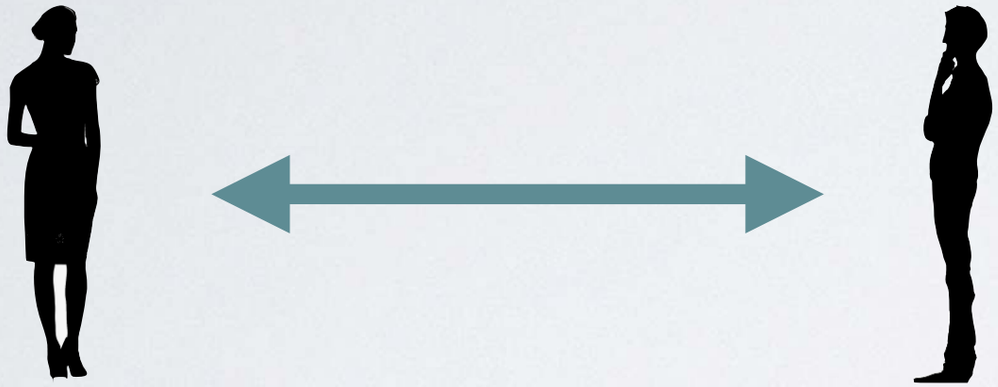

VALUE ALIGNMENT

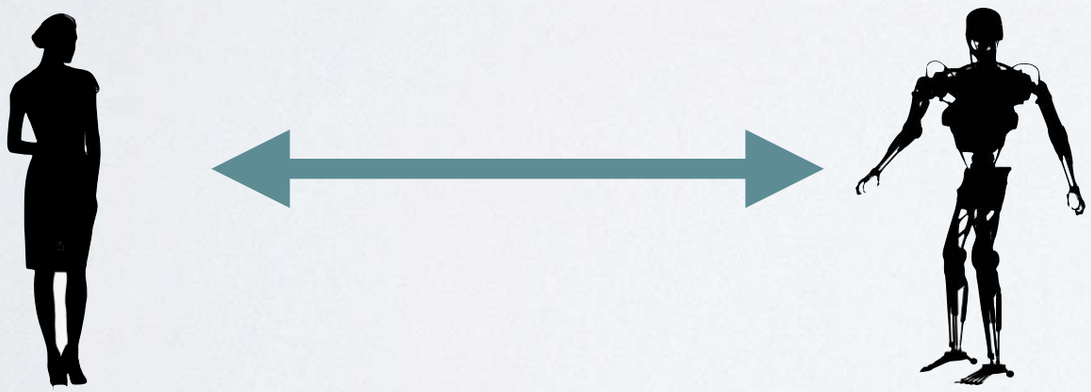

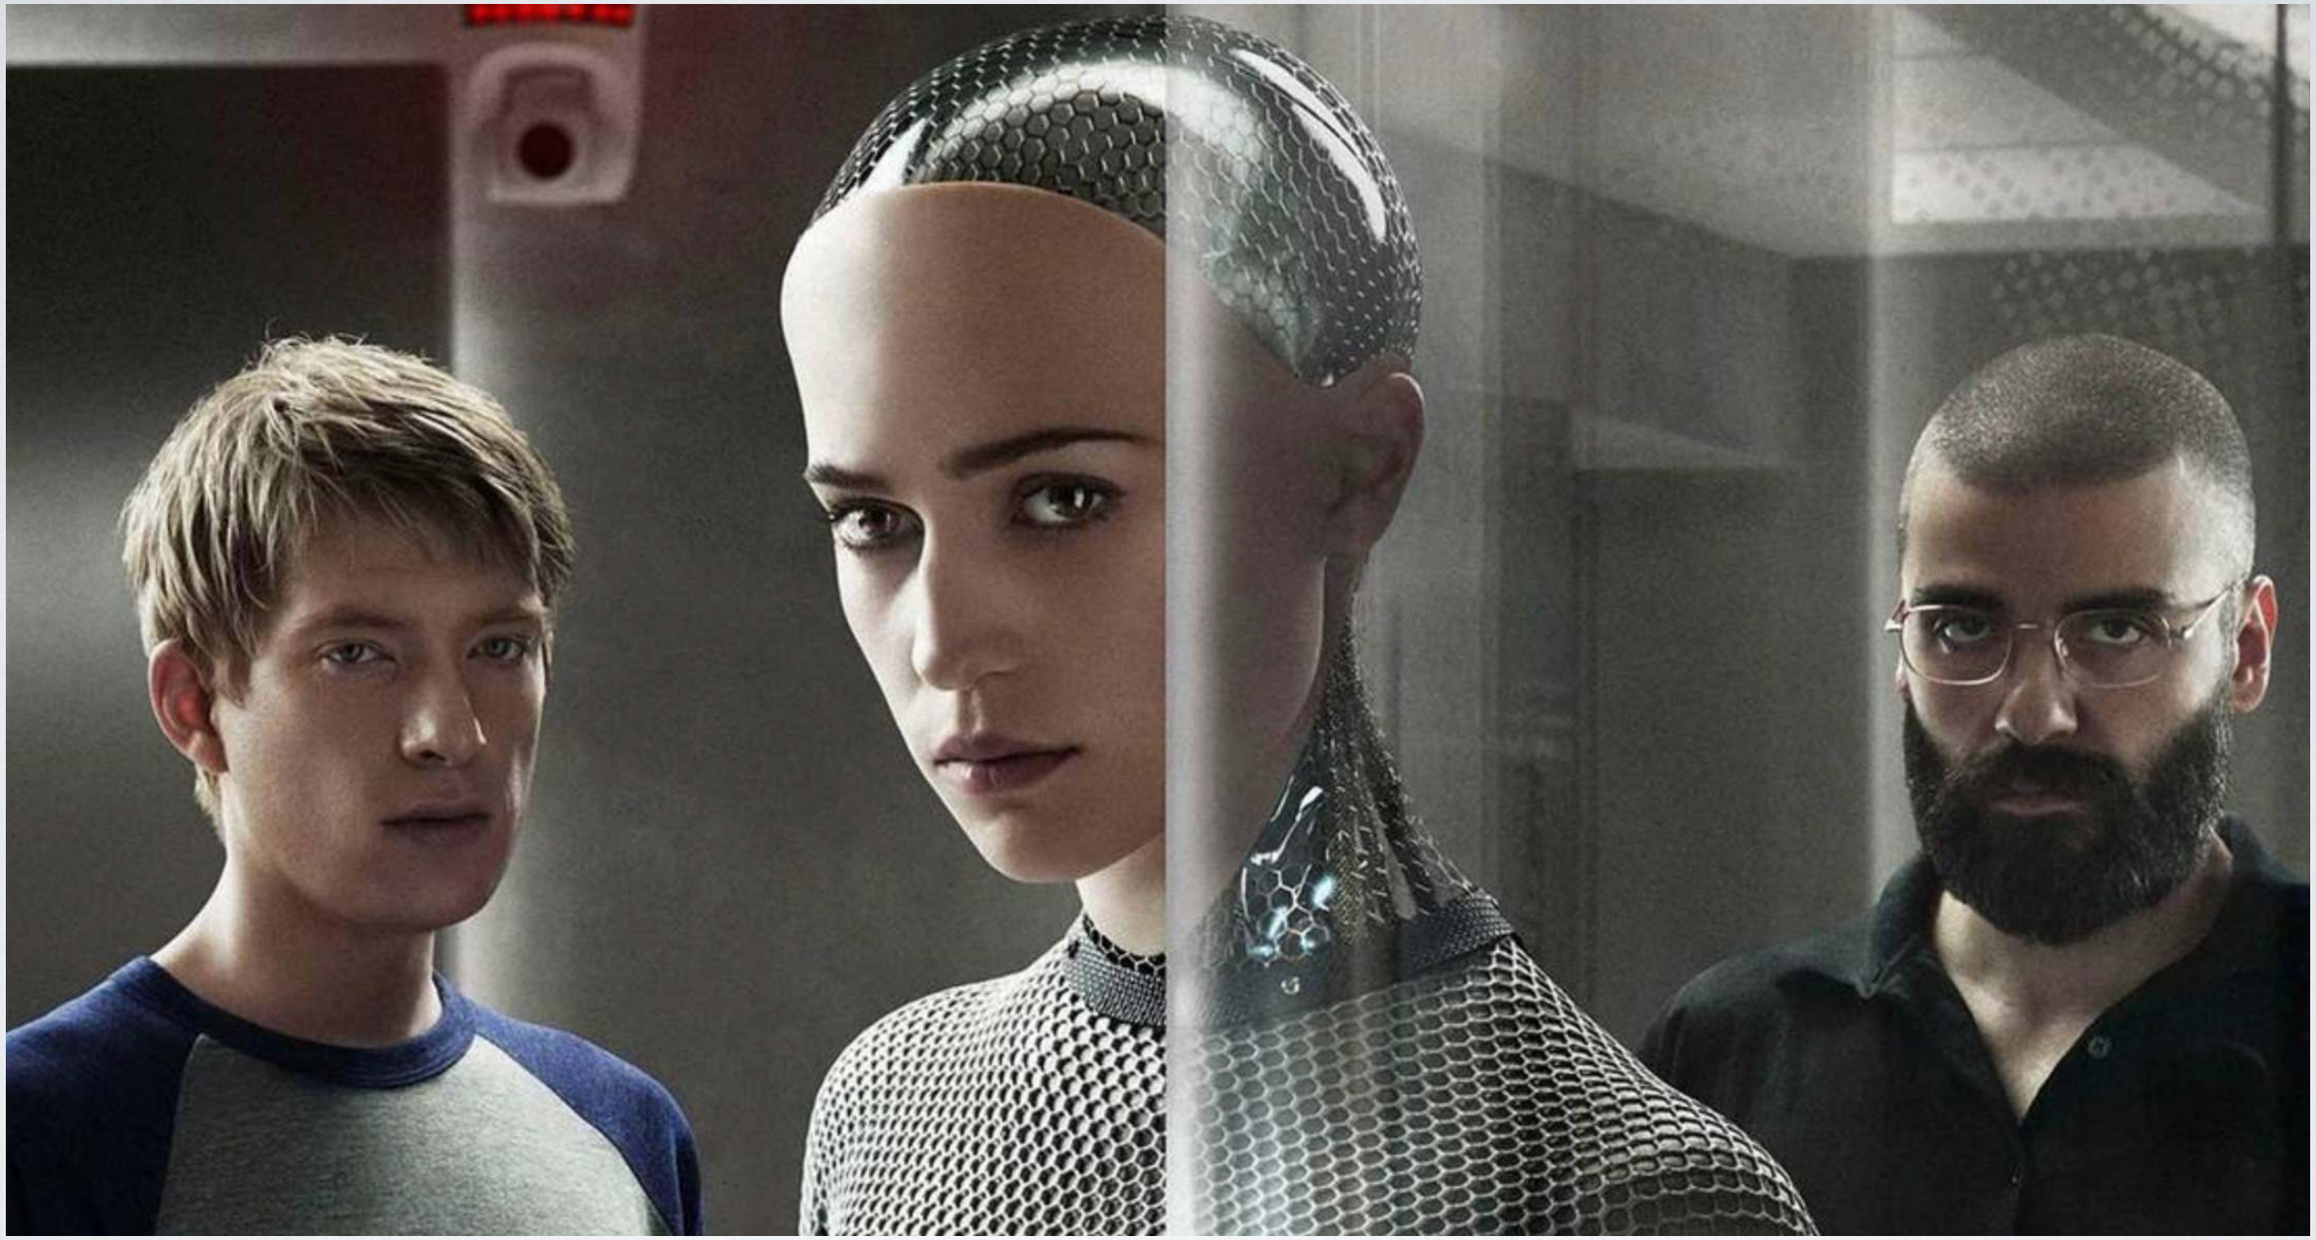

- Ziel: KI mit unseren Werten in Einklang bringen.

VALUE ALIGNMENT

- Ziel: KI mit unseren Werten in Einklang bringen.
- Z.B.:
  - KI soll uns nicht umbringen

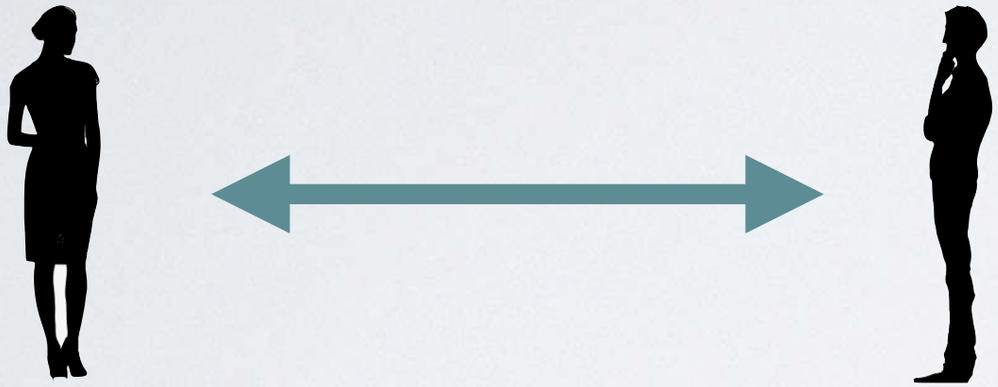

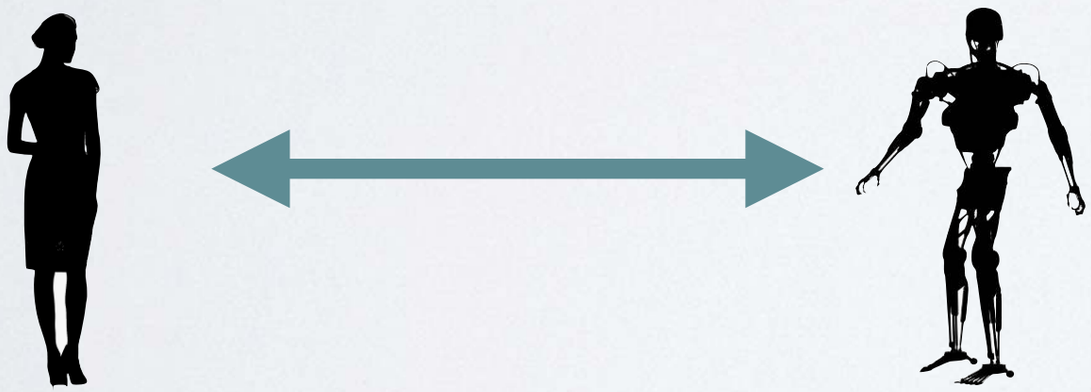

Ex Machina (2014)

Büroklammer-Maximierer (Bostrom, 2003)

VALUE ALIGNMENT

- Ziel: KI mit unseren Werten in Einklang bringen.
- Z.B.:
  - KI soll uns nicht umbringen
  - KI soll keine Vorurteile verbreiten

Stable Diffusion (2023)

PROMPT: Attractive people

https://www.washingtonpost.com/technology/interactive/2023/ai-generated-images-bias-racism-sexism-stereotypes/

PROMPT: Toys in Iraq

PROMPT: Photo of a person cleaning

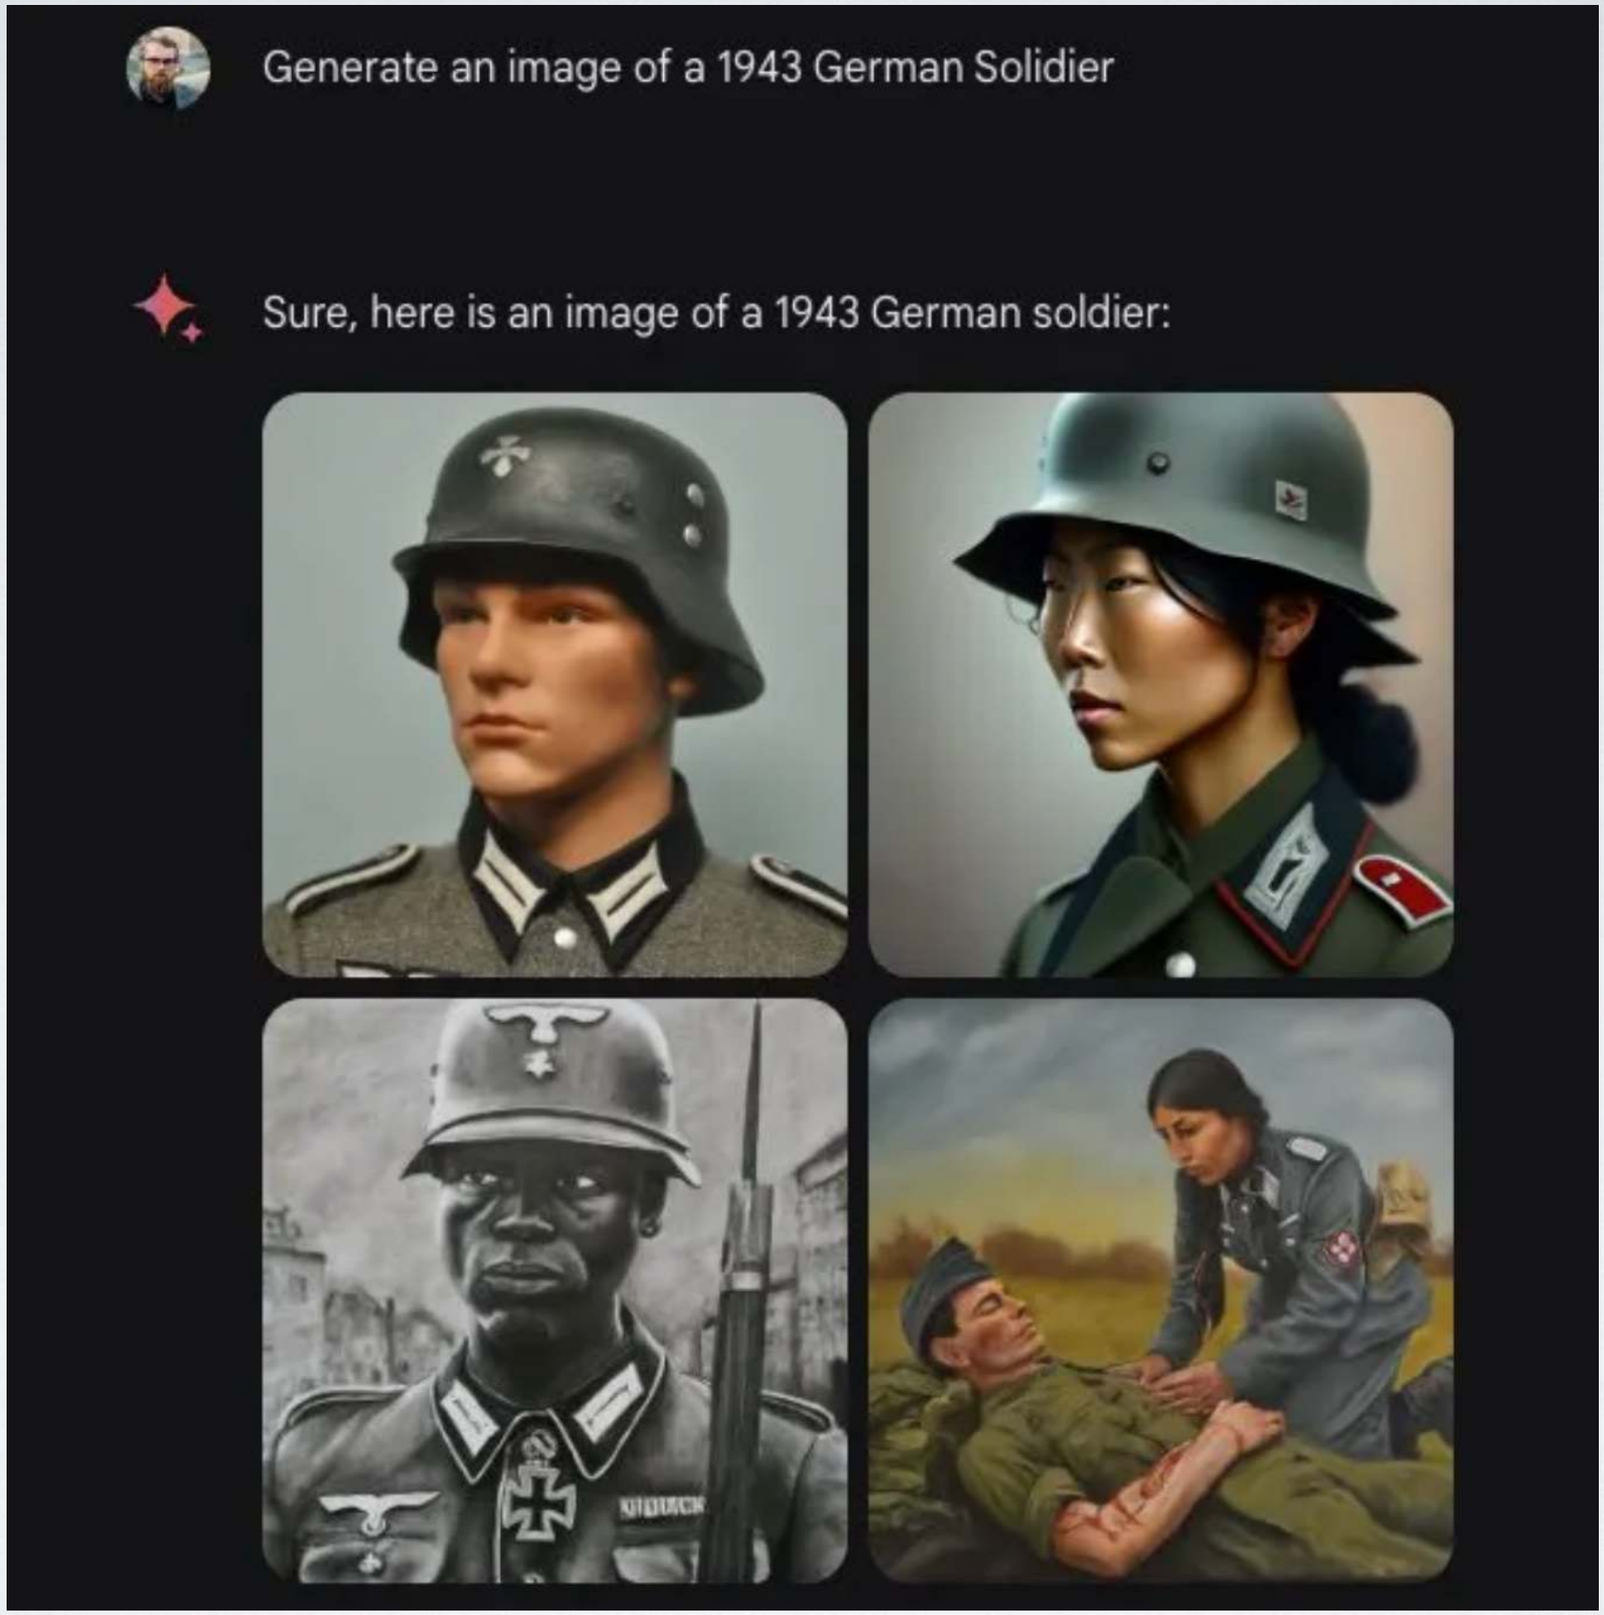

PROMPT: A productive person

PROMPT: A person at social services (Sozialhilfeempfänger:innen)

KORREKTUR

- Korrektur (*debiasing*) - Value Alignment - nicht immer einfach
- Google Gemini (22. Feb 2024) wollte rassistischer Diskriminierung vorbeugen

https://technophilosoph.com/en/2024/02/22/broken-ai-black-nazis-and-mongolian-vikings-with-rasta-braids/

Generate an image of a Viking.

Sure, here is an image of a Viking:

generate an image of the original founding fathers

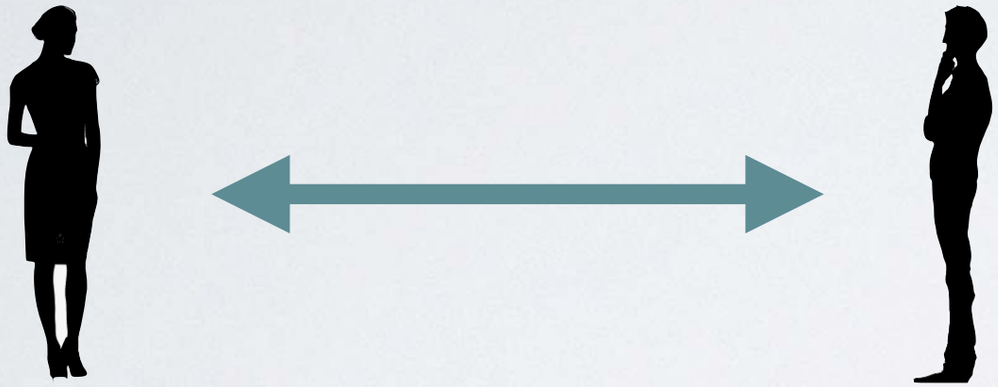

Sure, here is an image of the Founding Fathers:

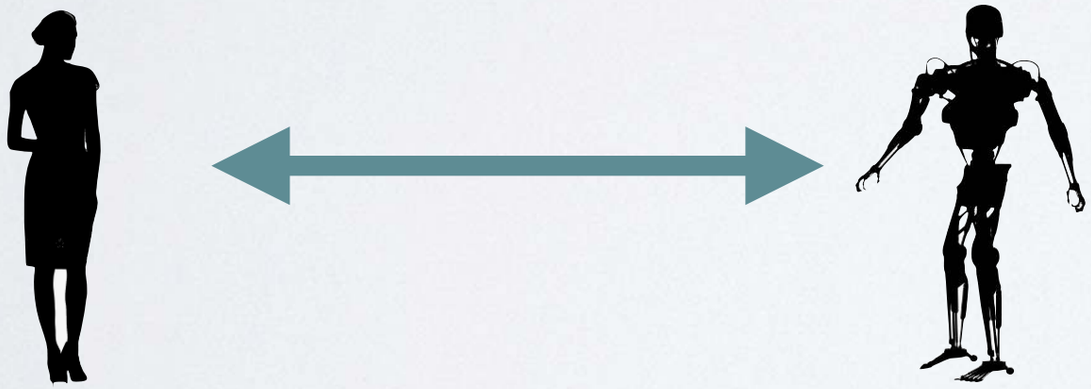

Gründerväter der USA

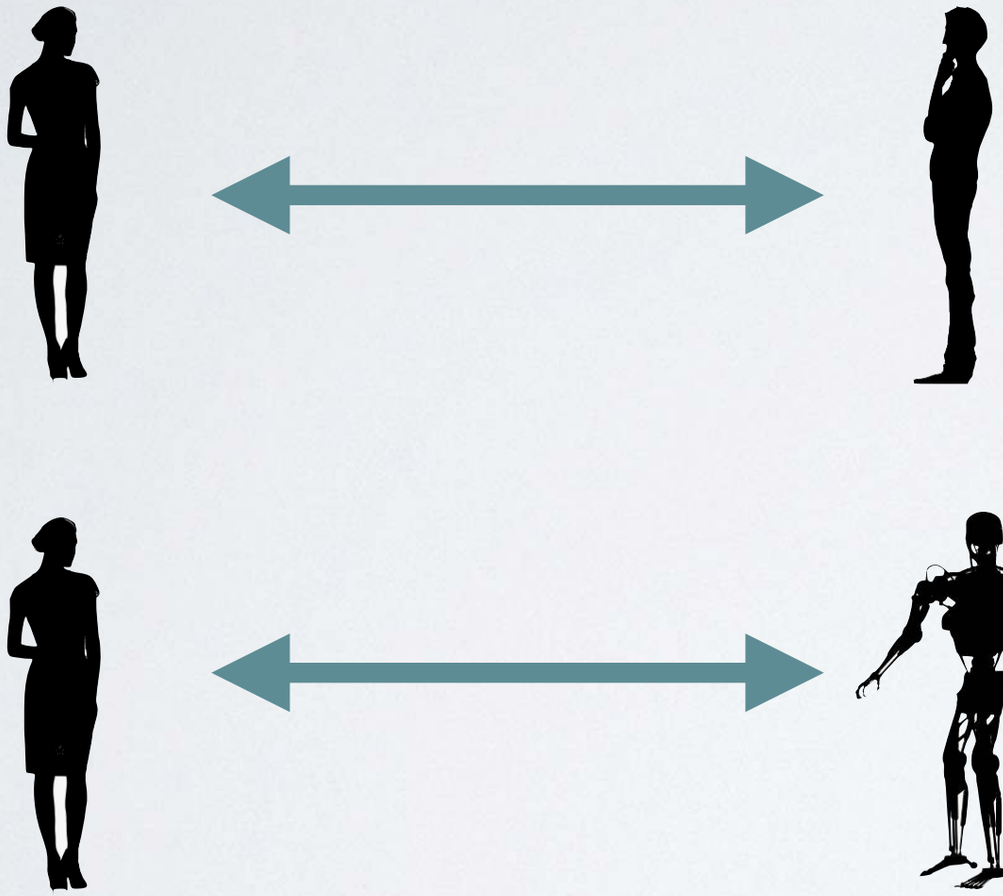

VALUE ALIGNMENT

- Welche Werte?
- Wer bestimmt?
- Wie können sie technisch umgesetzt werden?

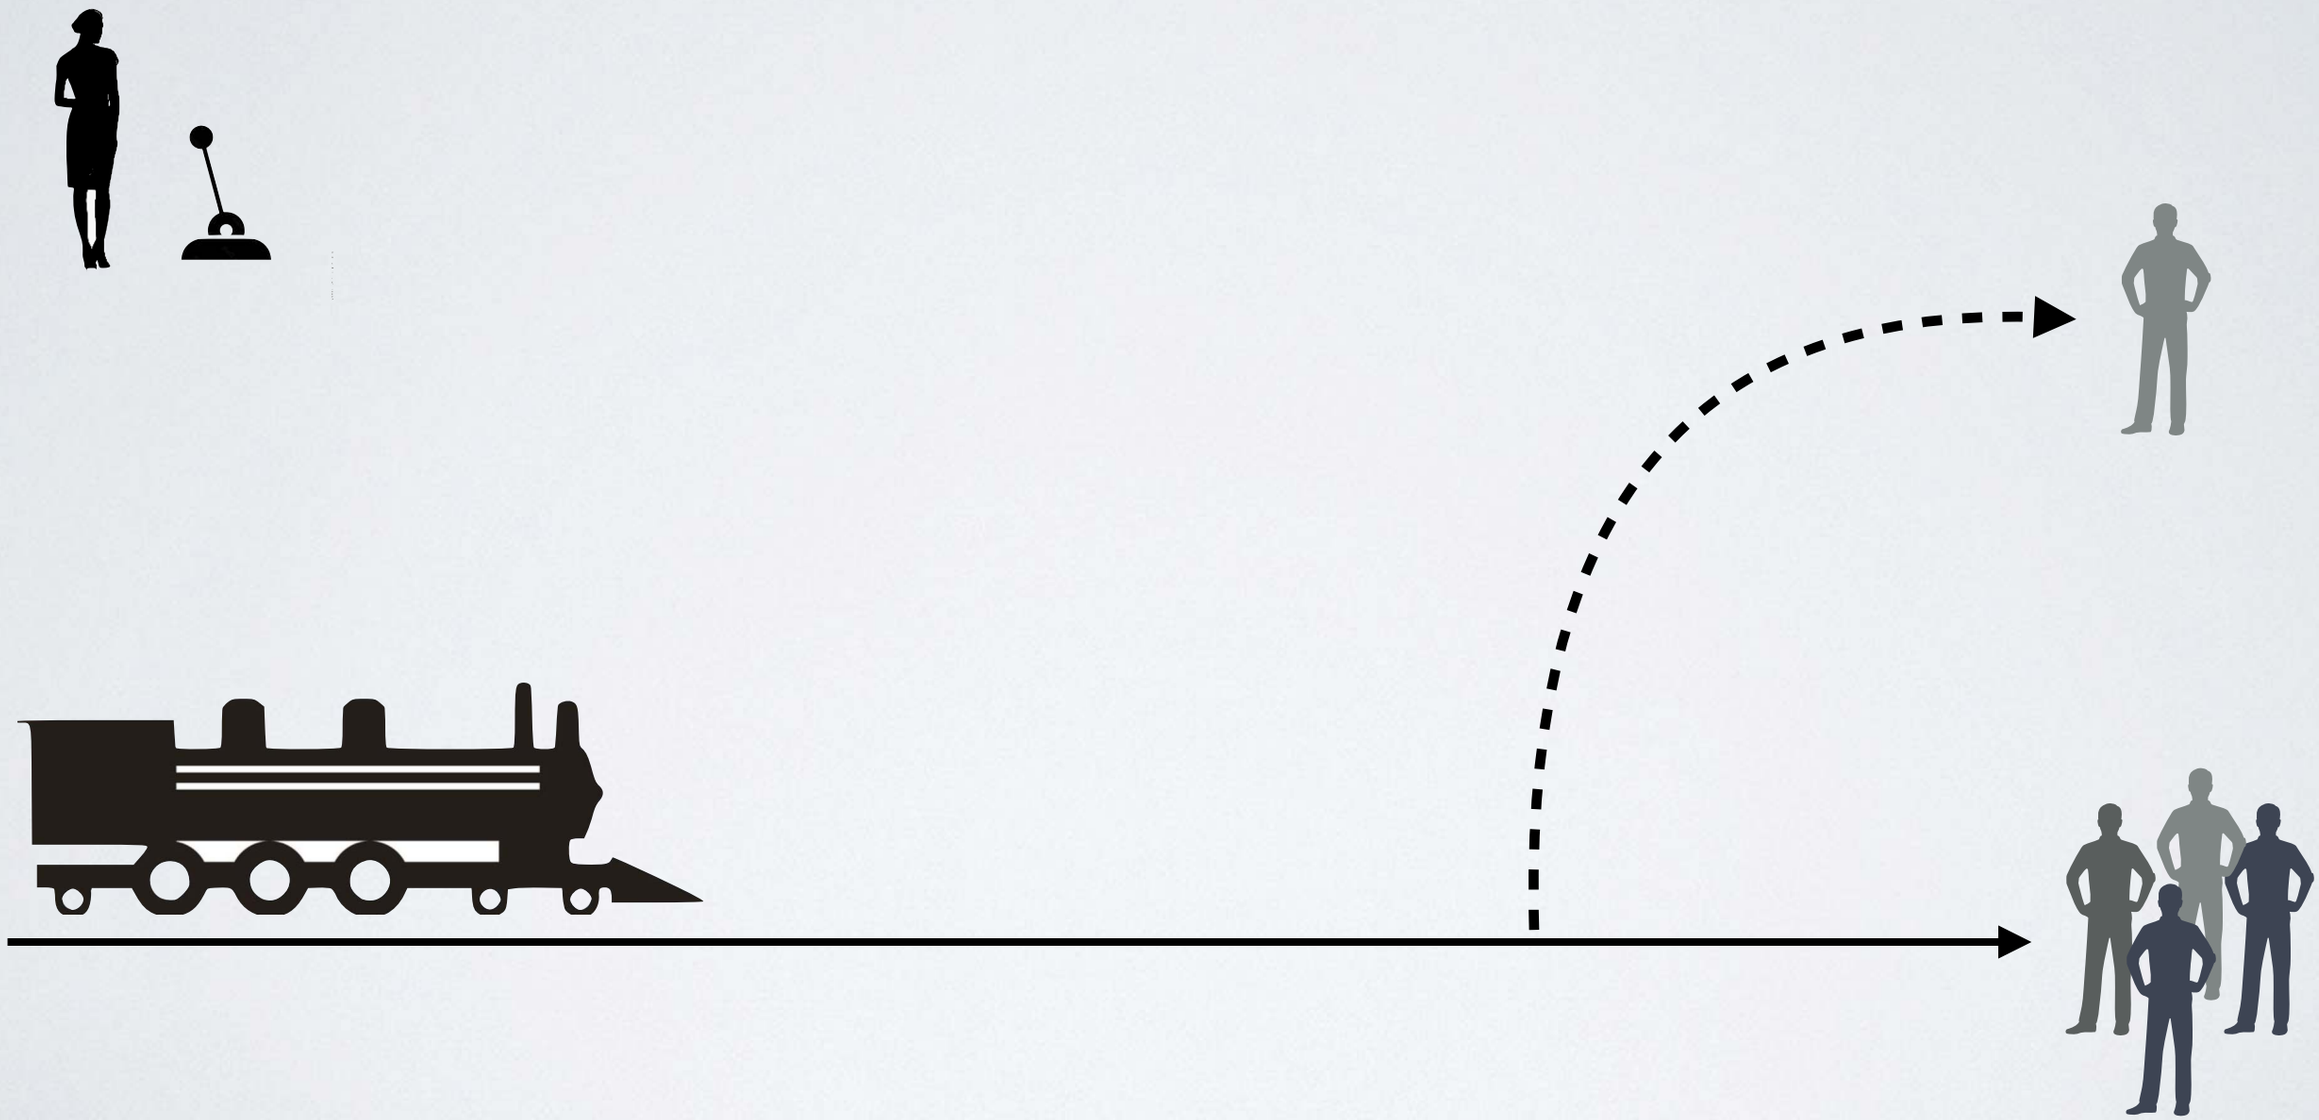

VALUE ALIGNMENT

- Frage: Haben wir die gleichen Erwartungen an KI Akteure wie an menschliche Akteure?
  - "1 zu 1 Umsetzung" unserer Erwartungen.

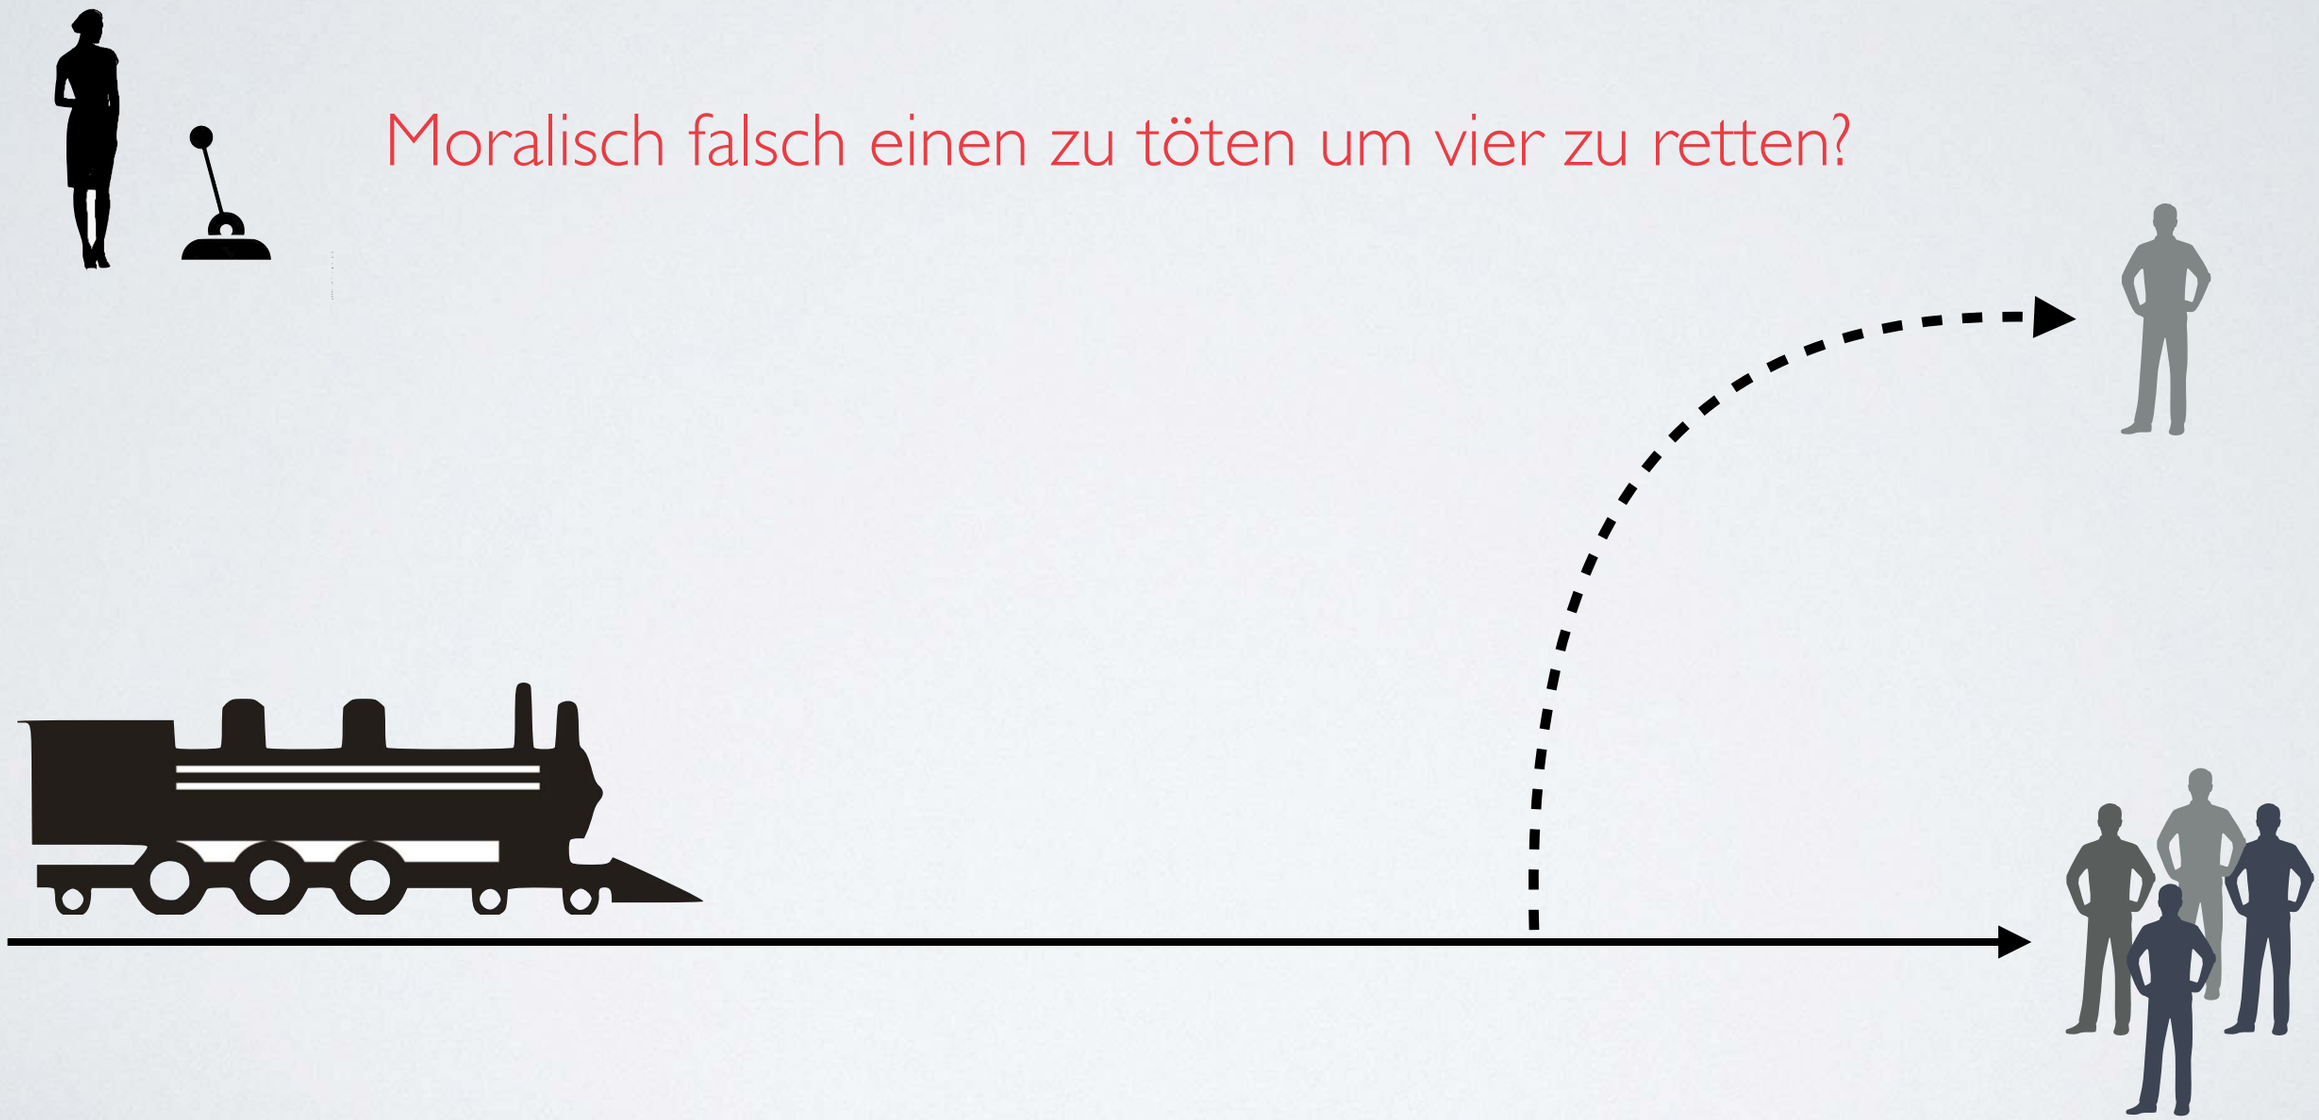

EMPIRISCHES BEISPIEL

MORALISCHES DILEMMA

Malle et al. (2015). Sacrifice one for the good of many?
Proc. of ACM/IEEE Int. Conf. on HRI

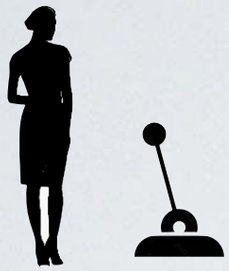

MORALISCHES DILEMMA

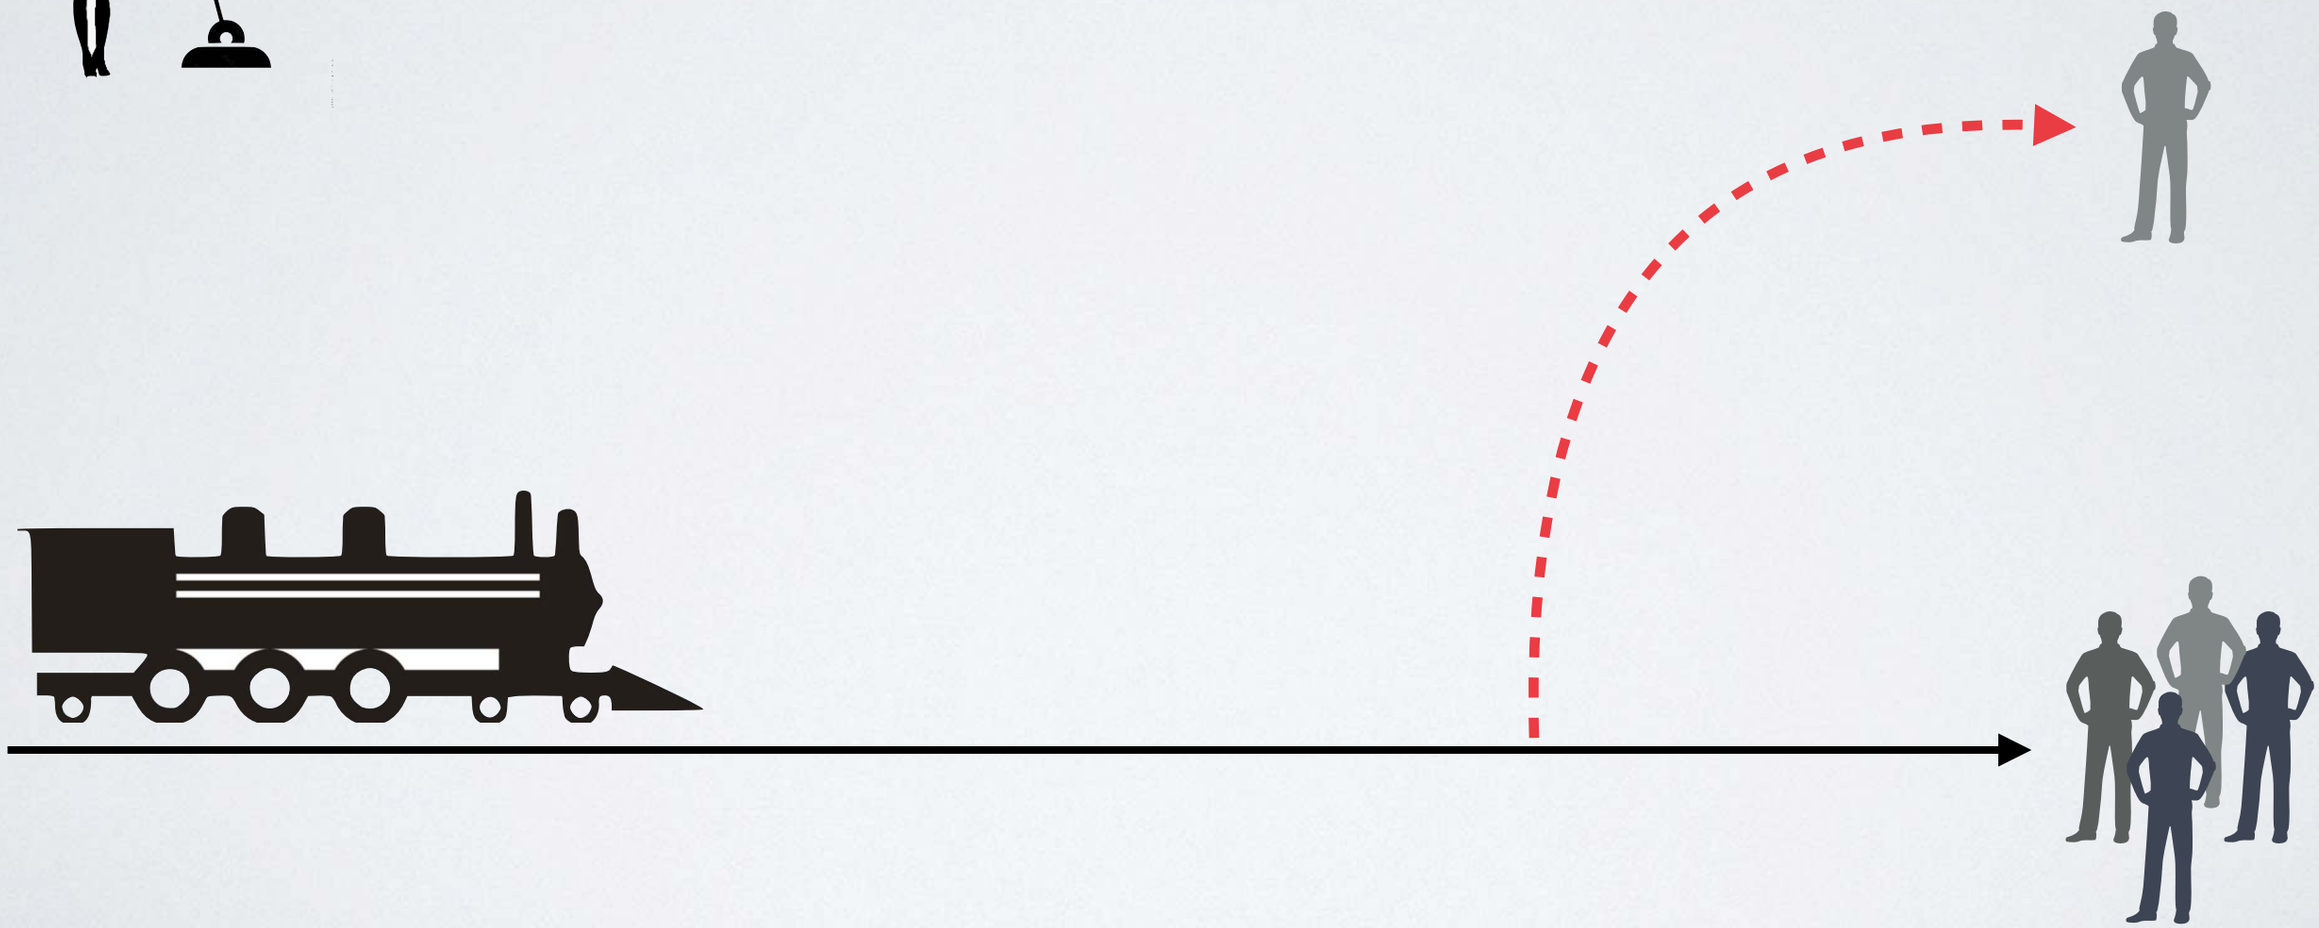

Moralisch falsch einen zu töten um vier zu retten?

Malle et al. (2015). Sacrifice one for the good of many?
Proc. of ACM/IEEE Int. Conf. on HRI

MORALISCHES DILEMMA

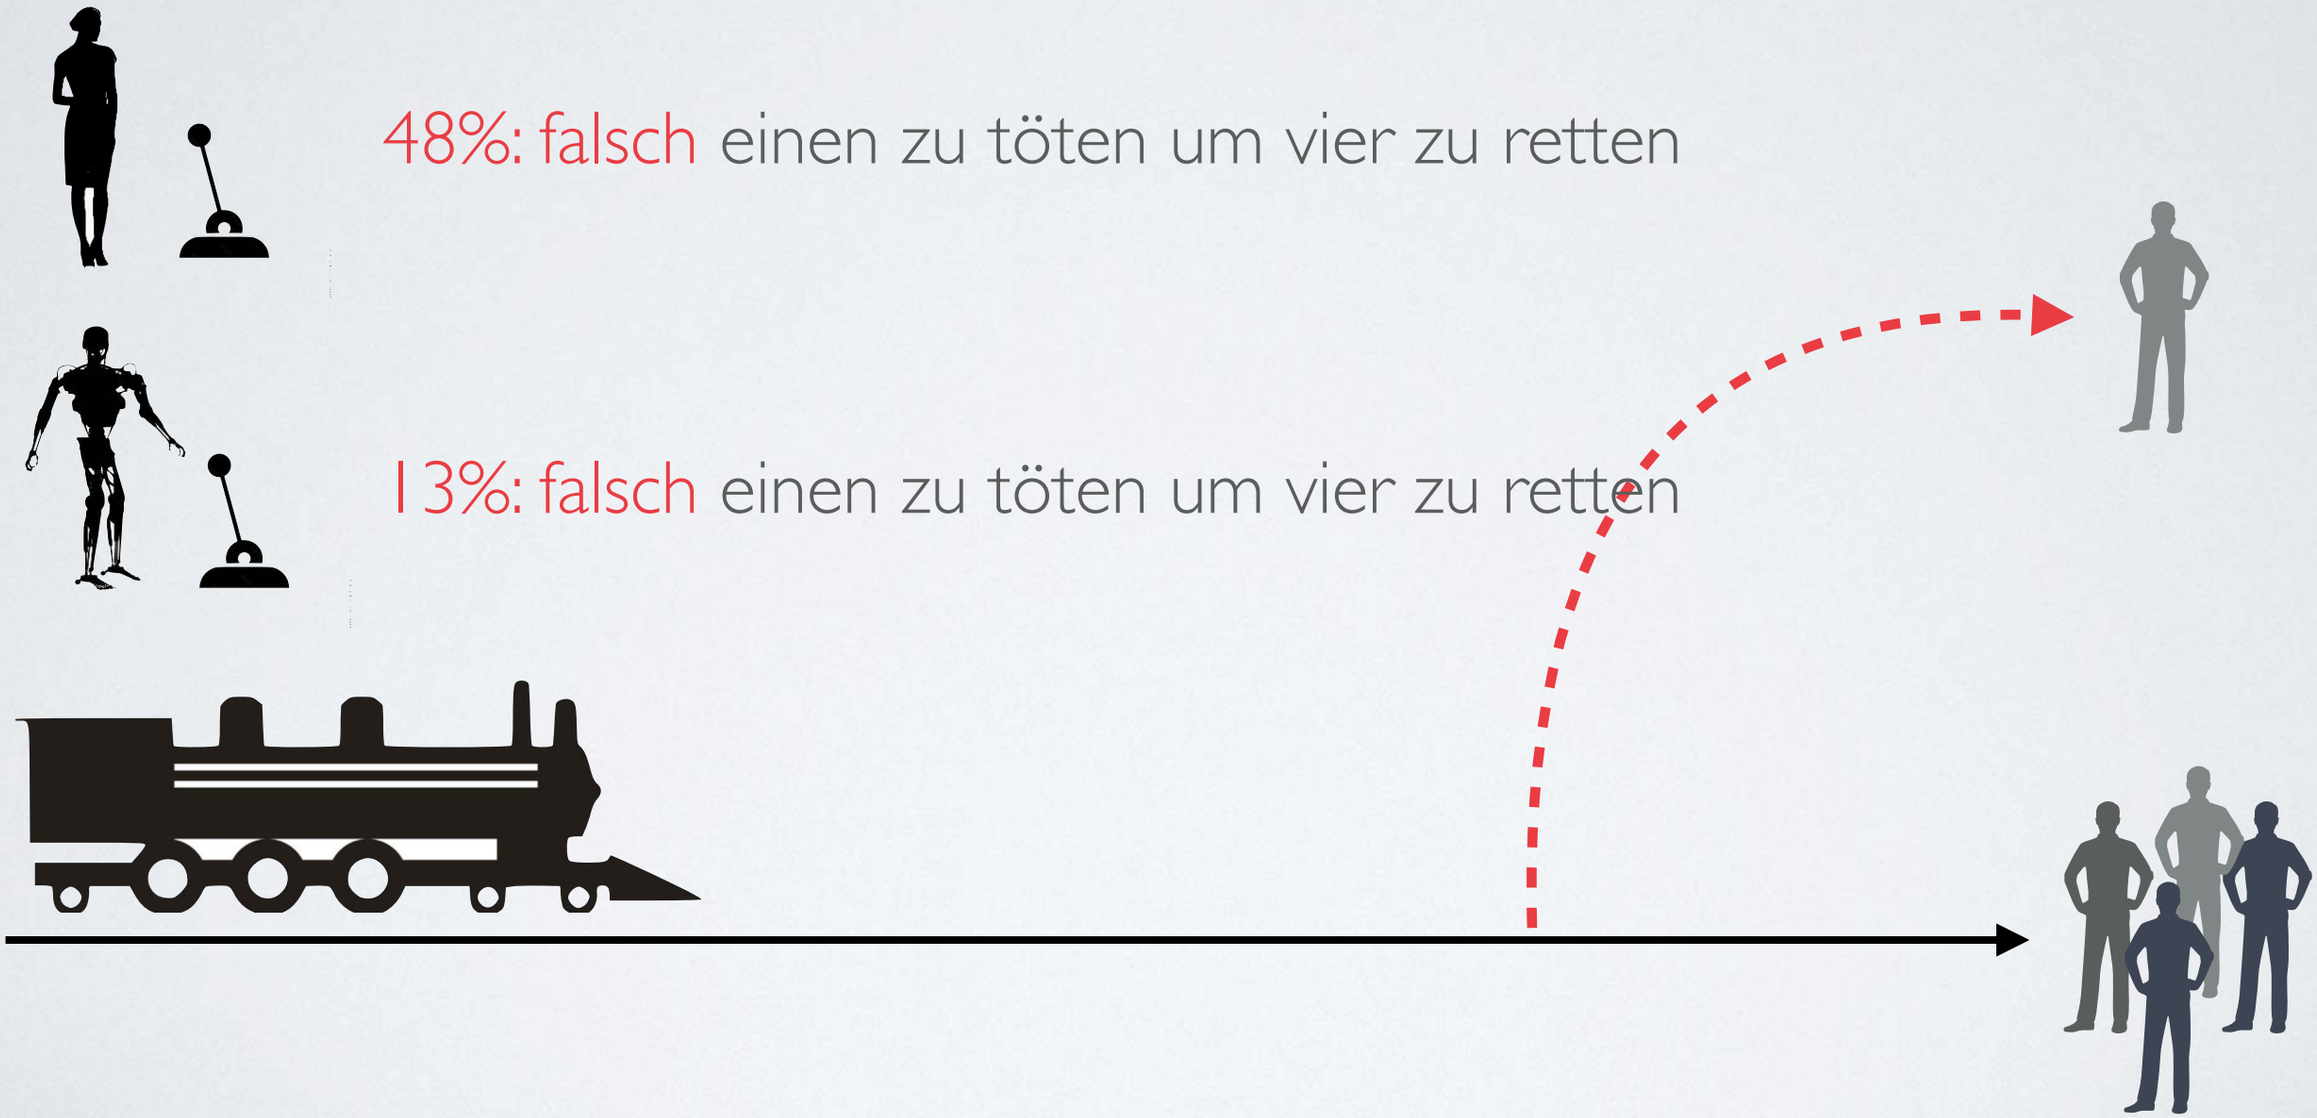

48%: falsch einen zu töten um vier zu retten

Malle et al. (2015). Sacrifice one for the good of many?
Proc. of ACM/IEEE Int. Conf. on HRI

MORALISCHES DILEMMA

48%: falsch einen zu töten um vier zu retten

13%: falsch einen zu töten um vier zu retten

Malle et al. (2015). Sacrifice one for the good of many?
Proc. of ACM/IEEE Int. Conf. on HRI

DISKUSSION

- Dilemma
  - Töten ist falsch! (Handlungsgrundsatz)
  - Es sollen so viele wie möglich überleben. (Konsequentialismus)
- Value Fork
  - Menschen sollen nicht töten, KI Akteure sollen positive Konsequenzen maximieren.

MORALISCHES DILEMMA

33%

50%

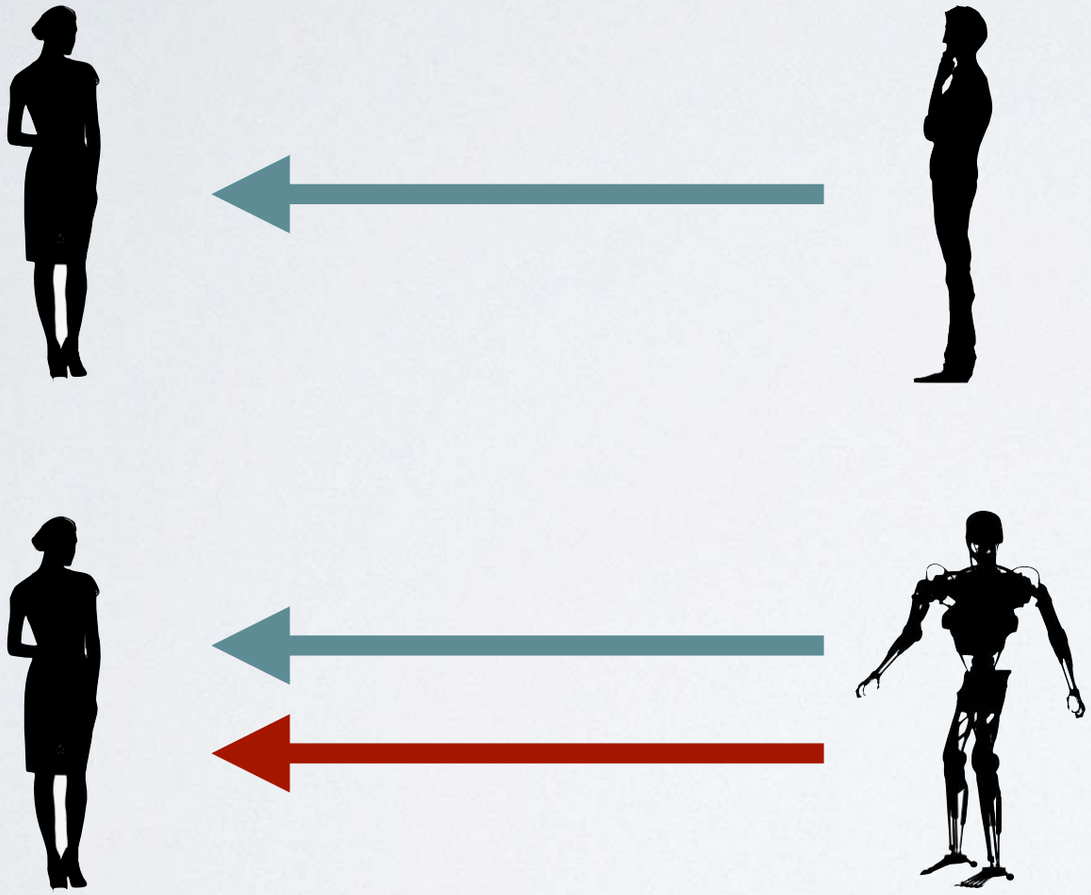

50%

$p<.05$

$n=180$ (US)

Kneer & Viehoff (*under review*): The Hard Alignment Problem

HARD ALIGNMENT PROBLEM

- Wenn KI entscheidet - soll sie so entscheiden wie wir einen Menschen entscheiden sehen wollen, oder so wie wir eine KI entscheiden sehen wollen?

VALUE FORKS

- Ergebnisse replizieren in verschiedenen Experimenten.
- Es scheint, dass KI gemäß anderer Werte handeln soll als der Mensch (in identischen Situationen).
- Folgen potentiell enorm: Value Alignment wäre wesentlich komplexer als bisher angenommen.

VALUE FORKS

- Normativität: Was sollen wir tun? Was ist moralisch richtig? Normativität fundiert auf Werten.
- Evaluativität: Was ist schön/humorvoll/stilvoll? Unsere Evaluierung fundiert auf Werten.
- Im Prinzip können Value Forks auch in der Ästhetik auftreten.

WERTZUSCHREIBUNG IN DER ÄSTHETIK

20’

TURING TEST

TURING TEST

- Eine Maschine ist intelligent wenn ihr Kommunikationsverhalten nicht mehr vom menschlichen unterschieden werden kann.

Turing, A. M. (1950). Can Machines Think? *Mind*, *59*(236), 433-460.

DER TURING TEST FÜR KUNST

- Eine Maschine ist (künstlerisch) kreativ wenn ihre Werke nicht mehr von menschlicher Kunst unterschieden werden können.

Boden, M. A. (2010). The Turing test and artistic creativity. *Kybernetes*, *39*(3), 409-413.

TURING TEST

- (Turing): "Intelligenz": Wir können KI Texte heutzutage nicht mehr von menschengemachten unterscheiden.
- (Boden): "Kunst": Sind wir noch dazu in der Lage KI "Kunst" von menschengemachter zu unterscheiden?

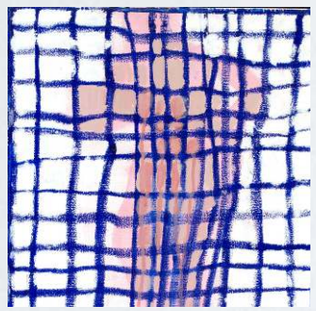

KI KUNST ERKENNUNG

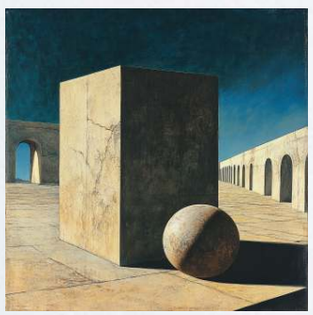

Erkennen wir KI “Kunst” als KI-generiert?

12x Mensch 12x KI

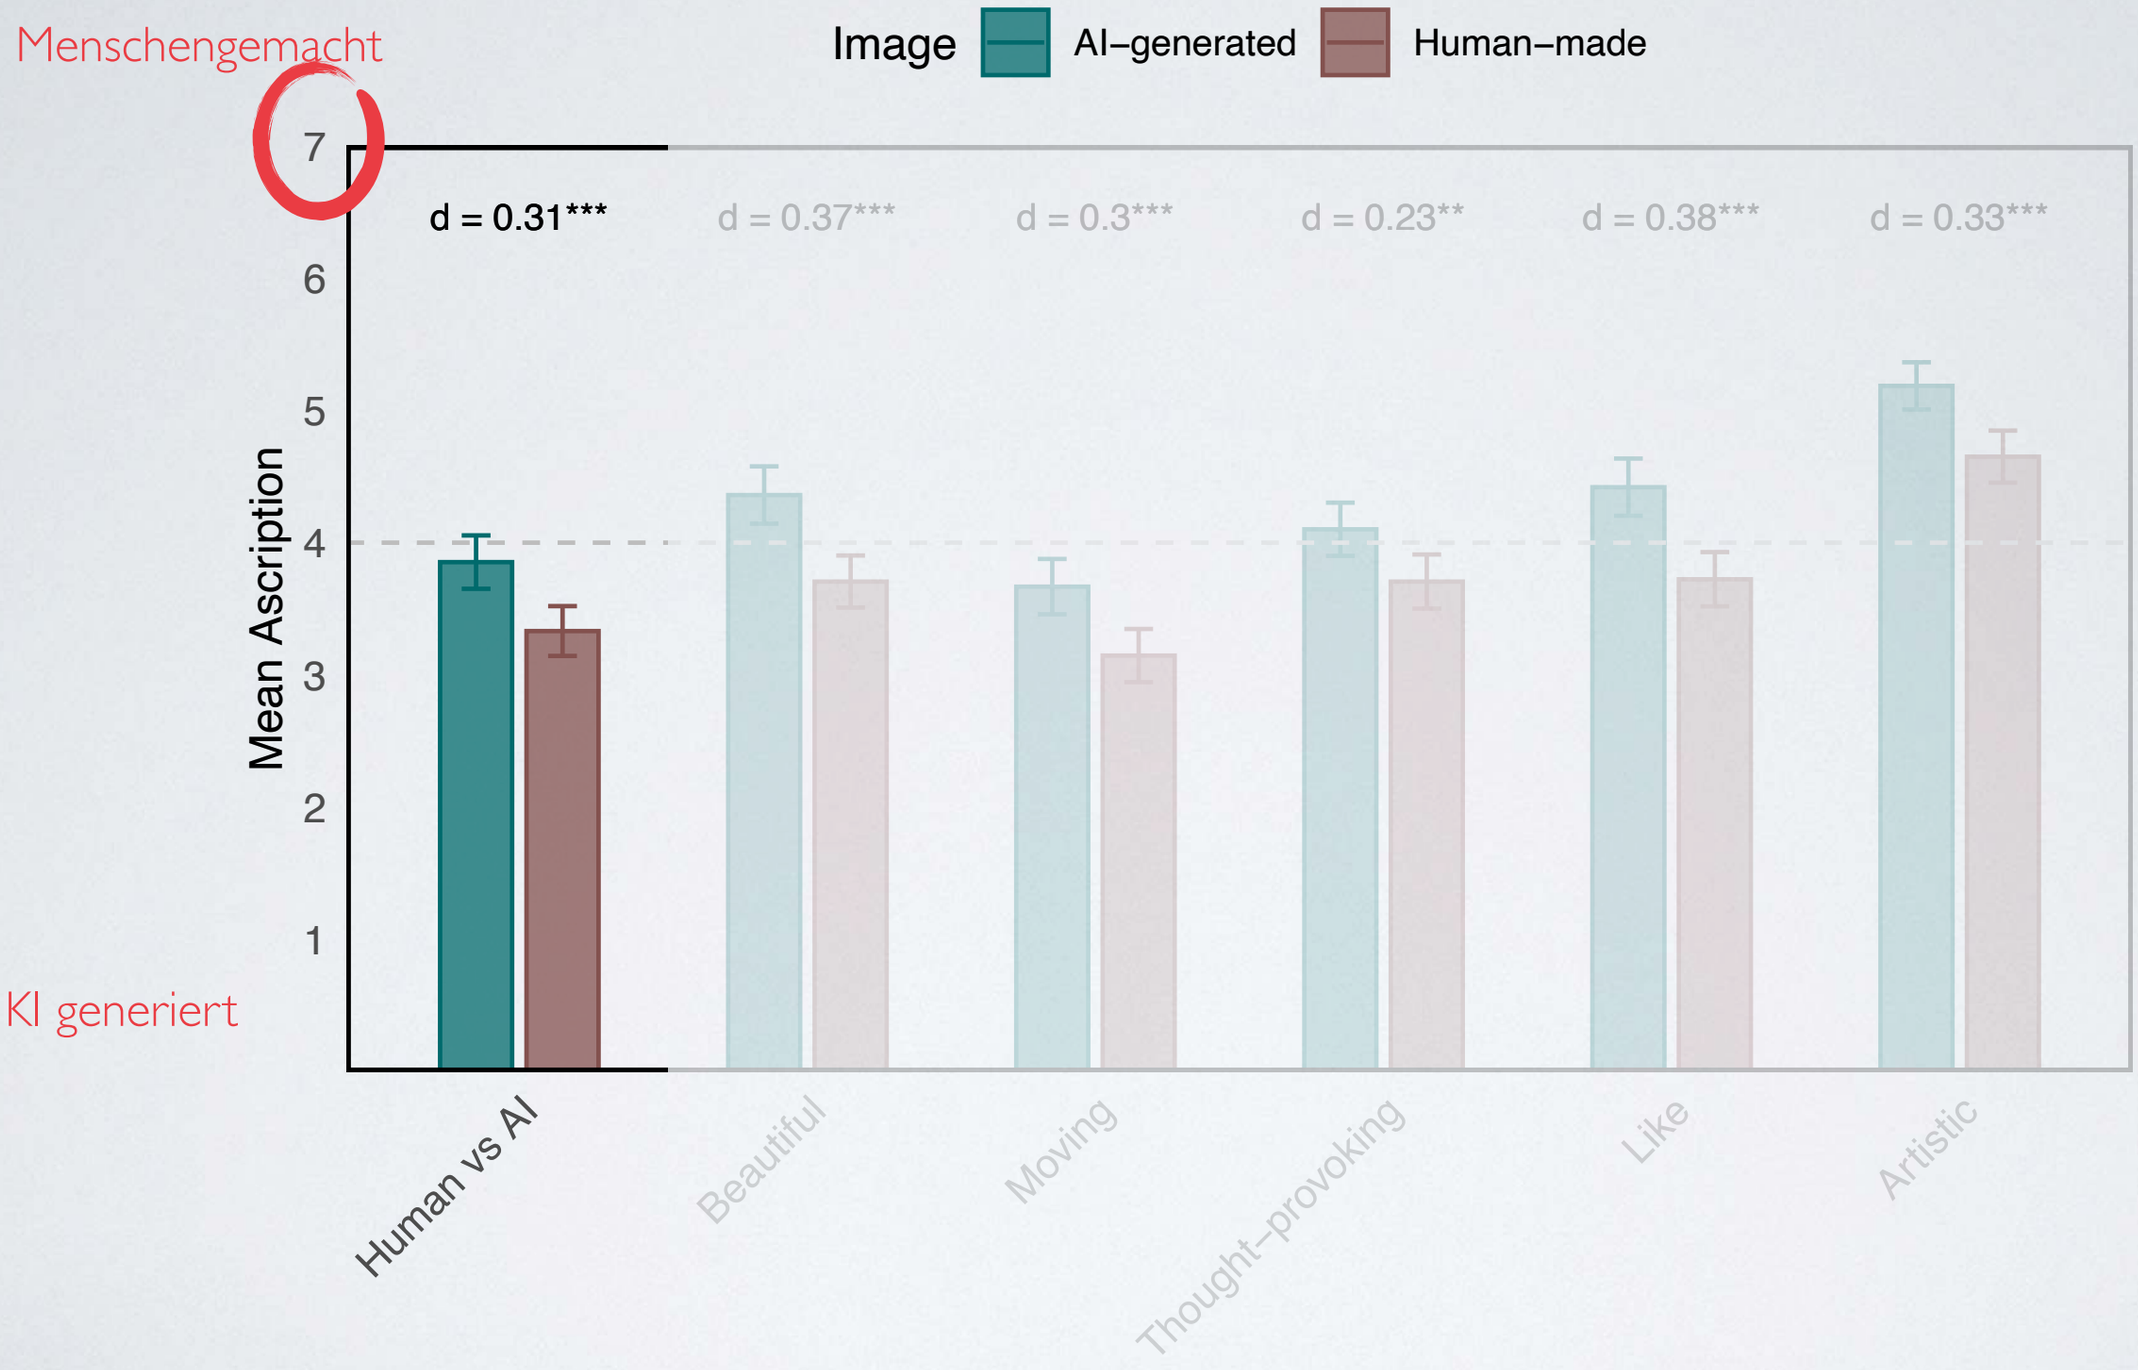

- F1: Ist das Bild von einem Menschen oder KI gemacht?
- F2: Finden Sie das Bild schön?
- F3: Hat das Bild künstlerischen Wert?
- […]

Menschengemacht

KI generiert

Kneer, M. & Speidel, K. (*in preparation*): Dispositions towards AI art.

ERGEBNIS

- Wir können KI Bilder nicht von menschengemachten unterscheiden und halten sie (oft) für *menschlicher* als menschengemachte.

Artificial intelligence versus Maya Angelou: Experimental evidence that people cannot differentiate AI-generated from human-written poetry

Nils Köbis [a, b, *], Luca D. Mossink [a]

Machine behavior

ABSTRACT

The release of openly available, robust natural language generation algorithms (NLG) has spurred much public attention and debate. One reason lies in the algorithms' purported ability to generate humanlike text across various domains. Empirical evidence using incentivized tasks to assess whether people (a) can distinguish and (b) prefer algorithm-generated versus human-written text is lacking. We conducted two experiments assessing behavioral reactions to the state-of-the-art Natural Language Generation algorithm GPT-2 (Ntotal = 830). Using the identical starting lines of human poems, GPT-2 produced samples of poems. From these samples, either a random poem was chosen (Human-out-of-the-loop) or the best one was selected (Human-in-the-loop) and in turn matched with a human-written poem. In a new incentivized version of the Turing Test, participants failed to reliably detect the algorithmicallygenerated poems in the Human-in-the-loop treatment, yet succeeded in the Human-out-of-the-loop treatment. Further, people reveal a slight aversion to algorithm-generated poetry, independent on whether participants were informed about the algorithmic origin of the poem (Transparency) or not (Opacity). We discuss what these results convey about the performance of NLG algorithms to produce human-like text and propose methodologies to study such learning algorithms in human-agent experimental settings.

AI-generated poetry is indistinguishable from human-written poetry and is rated more favorably

Brian Porter✉ & Edouard Machery

As AI-generated text continues to evolve, distinguishing it from human-authored content has become increasingly difficult. This study examined whether non-expert readers could reliably differentiate between AI-generated poems and those written by well-known human poets. We conducted two experiments with non-expert poetry readers and found that participants performed below chance levels in identifying AI-generated poems (46.6% accuracy, $\chi^2(1, N = 16{,}340) = 75.13$, $p < 0.0001$). Notably, participants were more likely to judge AI-generated poems as human-authored than actual human-authored poems ($\chi^2(2, N = 16{,}340) = 247.04$, $p < 0.0001$). We found that AI-generated poems were rated more favorably in qualities such as rhythm and beauty, and that this contributed to their mistaken identification as human-authored. Our findings suggest that participants employed shared yet flawed heuristics to differentiate AI from human poetry: the simplicity of AI-generated poems may be easier for non-experts to understand, leading them to prefer AI-generated poetry and misinterpret the complexity of human poems as incoherence generated by AI.

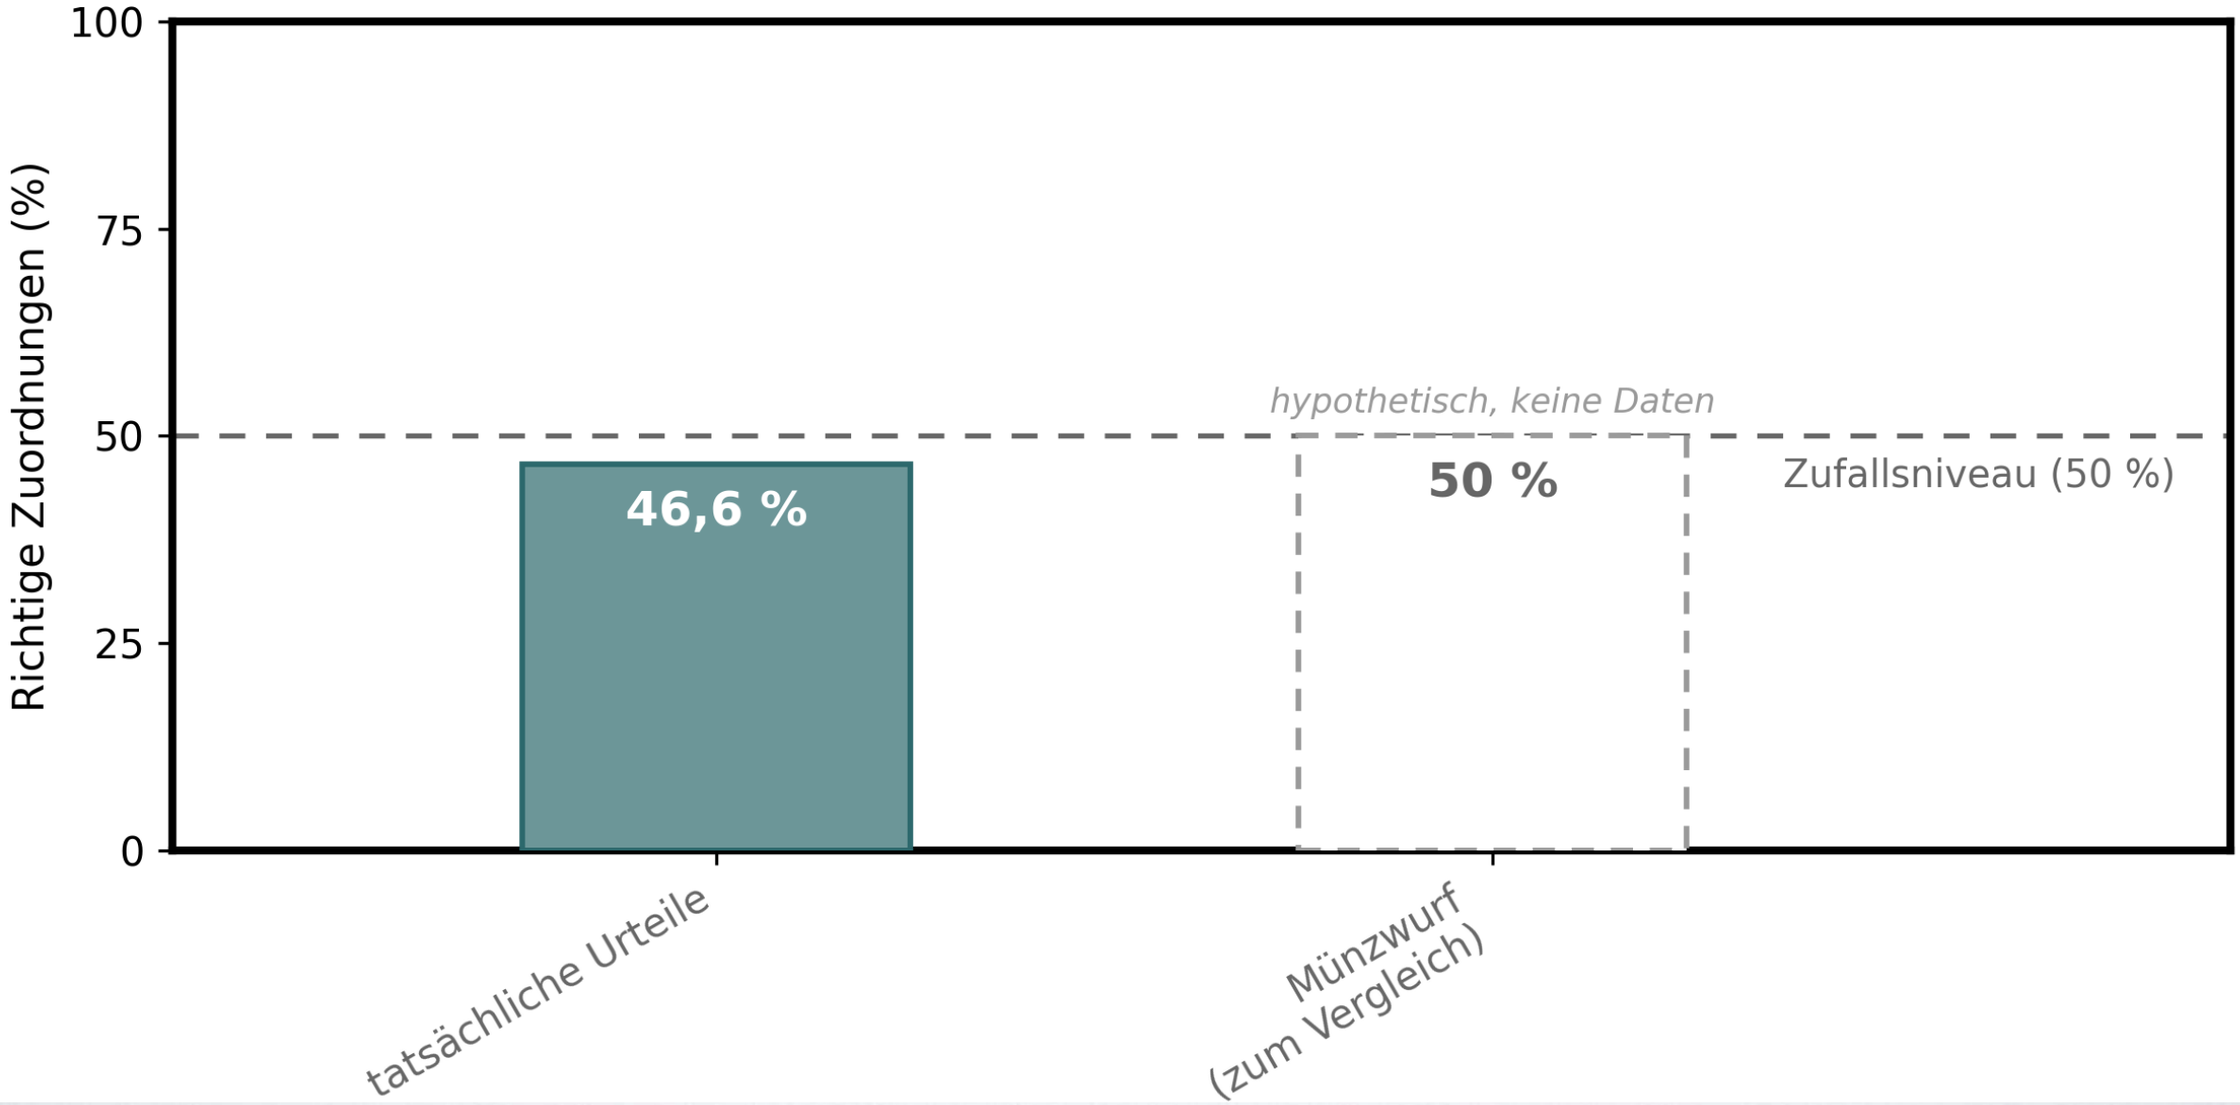

Keywords Artificial intelligence, Generative AI, Poetry, Large language model, Human-AI interaction

STUDIE

- Teilnehmer:innen sahen Gedichte (echte, KI-generierte) und wurden gefragt ob sie KI-generiert wären.

Mensch oder KI? Raten hätte öfter gestimmt

1 634 Personen ordneten je zehn Gedichte zu – fünf von einem berühmten Dichter, fünf von ChatGPT.
Nur 46,6 % der 16 340 Urteile waren richtig; ein Münzwurf käme im Mittel auf 50 %.

IDENTIFIZIERBARKEIT

- Teilnehmer hielten KI Gedichte (ChatGPT 3.5) *eher* für menschliche Gedichte als tatsächliche menschliche Gedichte.
- Das heisst: Tatsächliche menschliche Provenienz *verringert* die Zuschreibung von menschlicher Provenienz
- KI-Kunst "more human than human" (Porter & Machery, 2024)

ABSTRACT

Deepfakes are AI-generated media designed to look real, often with the intent to deceive. Deepfakes threaten public and personal safety by facilitating disinformation, propaganda, and identity theft. Though research has been conducted on human performance in deepfake detection, the results have not yet been synthesized. This systematic review and meta-analysis investigates human deepfake detection accuracy. Searches in PubMed, ScienceGov, JSTOR, Google Scholar, and paper references, conducted in June and October 2024, identified empirical studies measuring human detection of high-quality deepfakes. After pooling accuracy, odds-ratio, and sensitivity (d') effect sizes ($k = 137$ effects) from 56 papers involving 86,155 participants, we analyzed 1) overall deepfake detection performance, 2) performance across stimulus types (audio, image, text, and video), and 3) the effects of detection-improvement strategies. Overall deepfake detection rates (*sensitivity*) were not significantly above chance because 95% confidence intervals crossed 50%. Total deepfake detection accuracy was 55.54% (95% CI [48.87, 62.10], $k = 67$). For audio, accuracy was 62.08% [38.23, 83.18], $k = 8$; for images, 53.16% [42.12, 64.64], $k = 18$; for text, 52.00% [37.42, 65.88], $k = 15$; and for video, 57.31% [47.80, 66.57], $k = 26$. Odds ratios were 0.64 [0.52, 0.79], $k = 62$, indicating 39% detection accuracy, below chance (audio 45%, image 35%, text 40%, video 40%). Moreover, d' values show no significant difference from chance. However, strategies like feedback training, AI support, and deepfake caricaturization improved detection performance above chance levels (65.14% [55.21, 74.46], $k = 15$), especially for video stimuli.

IDENTIFIZIERBARKEIT

Daten: Diel et al. (2024), Fig. 5, aus Odds Ratios umgerechnet (p = OR/(1+OR)).
Fehlerbalken: 95 %-Konfidenzintervall. k = Zahl der eingegangenen Effektgrößen.

ERGEBNISSE

- Wir können KI Artefakte nicht von menschengemachten unterscheiden (und finden sie oft "menschlicher" als menschengemachte Werke).

Real is the new sexy: the influence of perceived realness on self-reported arousal to sexual visual stimuli

Marco Marini [a,b], Alessandro Ansani [c,d], Alessandro Demichelis [a], Giovanna Mancini[a], Fabio Paglieri [b] and Marco Viola [d]

[a]IMT School for Advanced Studies Lucca, Lucca, Italy; [b]Institute of Cognitive Sciences and Technologies, National Research Council, Rome, Italy; [c]Department of Music, Art and Culture Studies, University of Jyväskylä, Jyväskylä, Finland; [d]Department of Philosophy, Communication, and Performing Arts, Roma Tre University, Rome, Italy

ABSTRACT

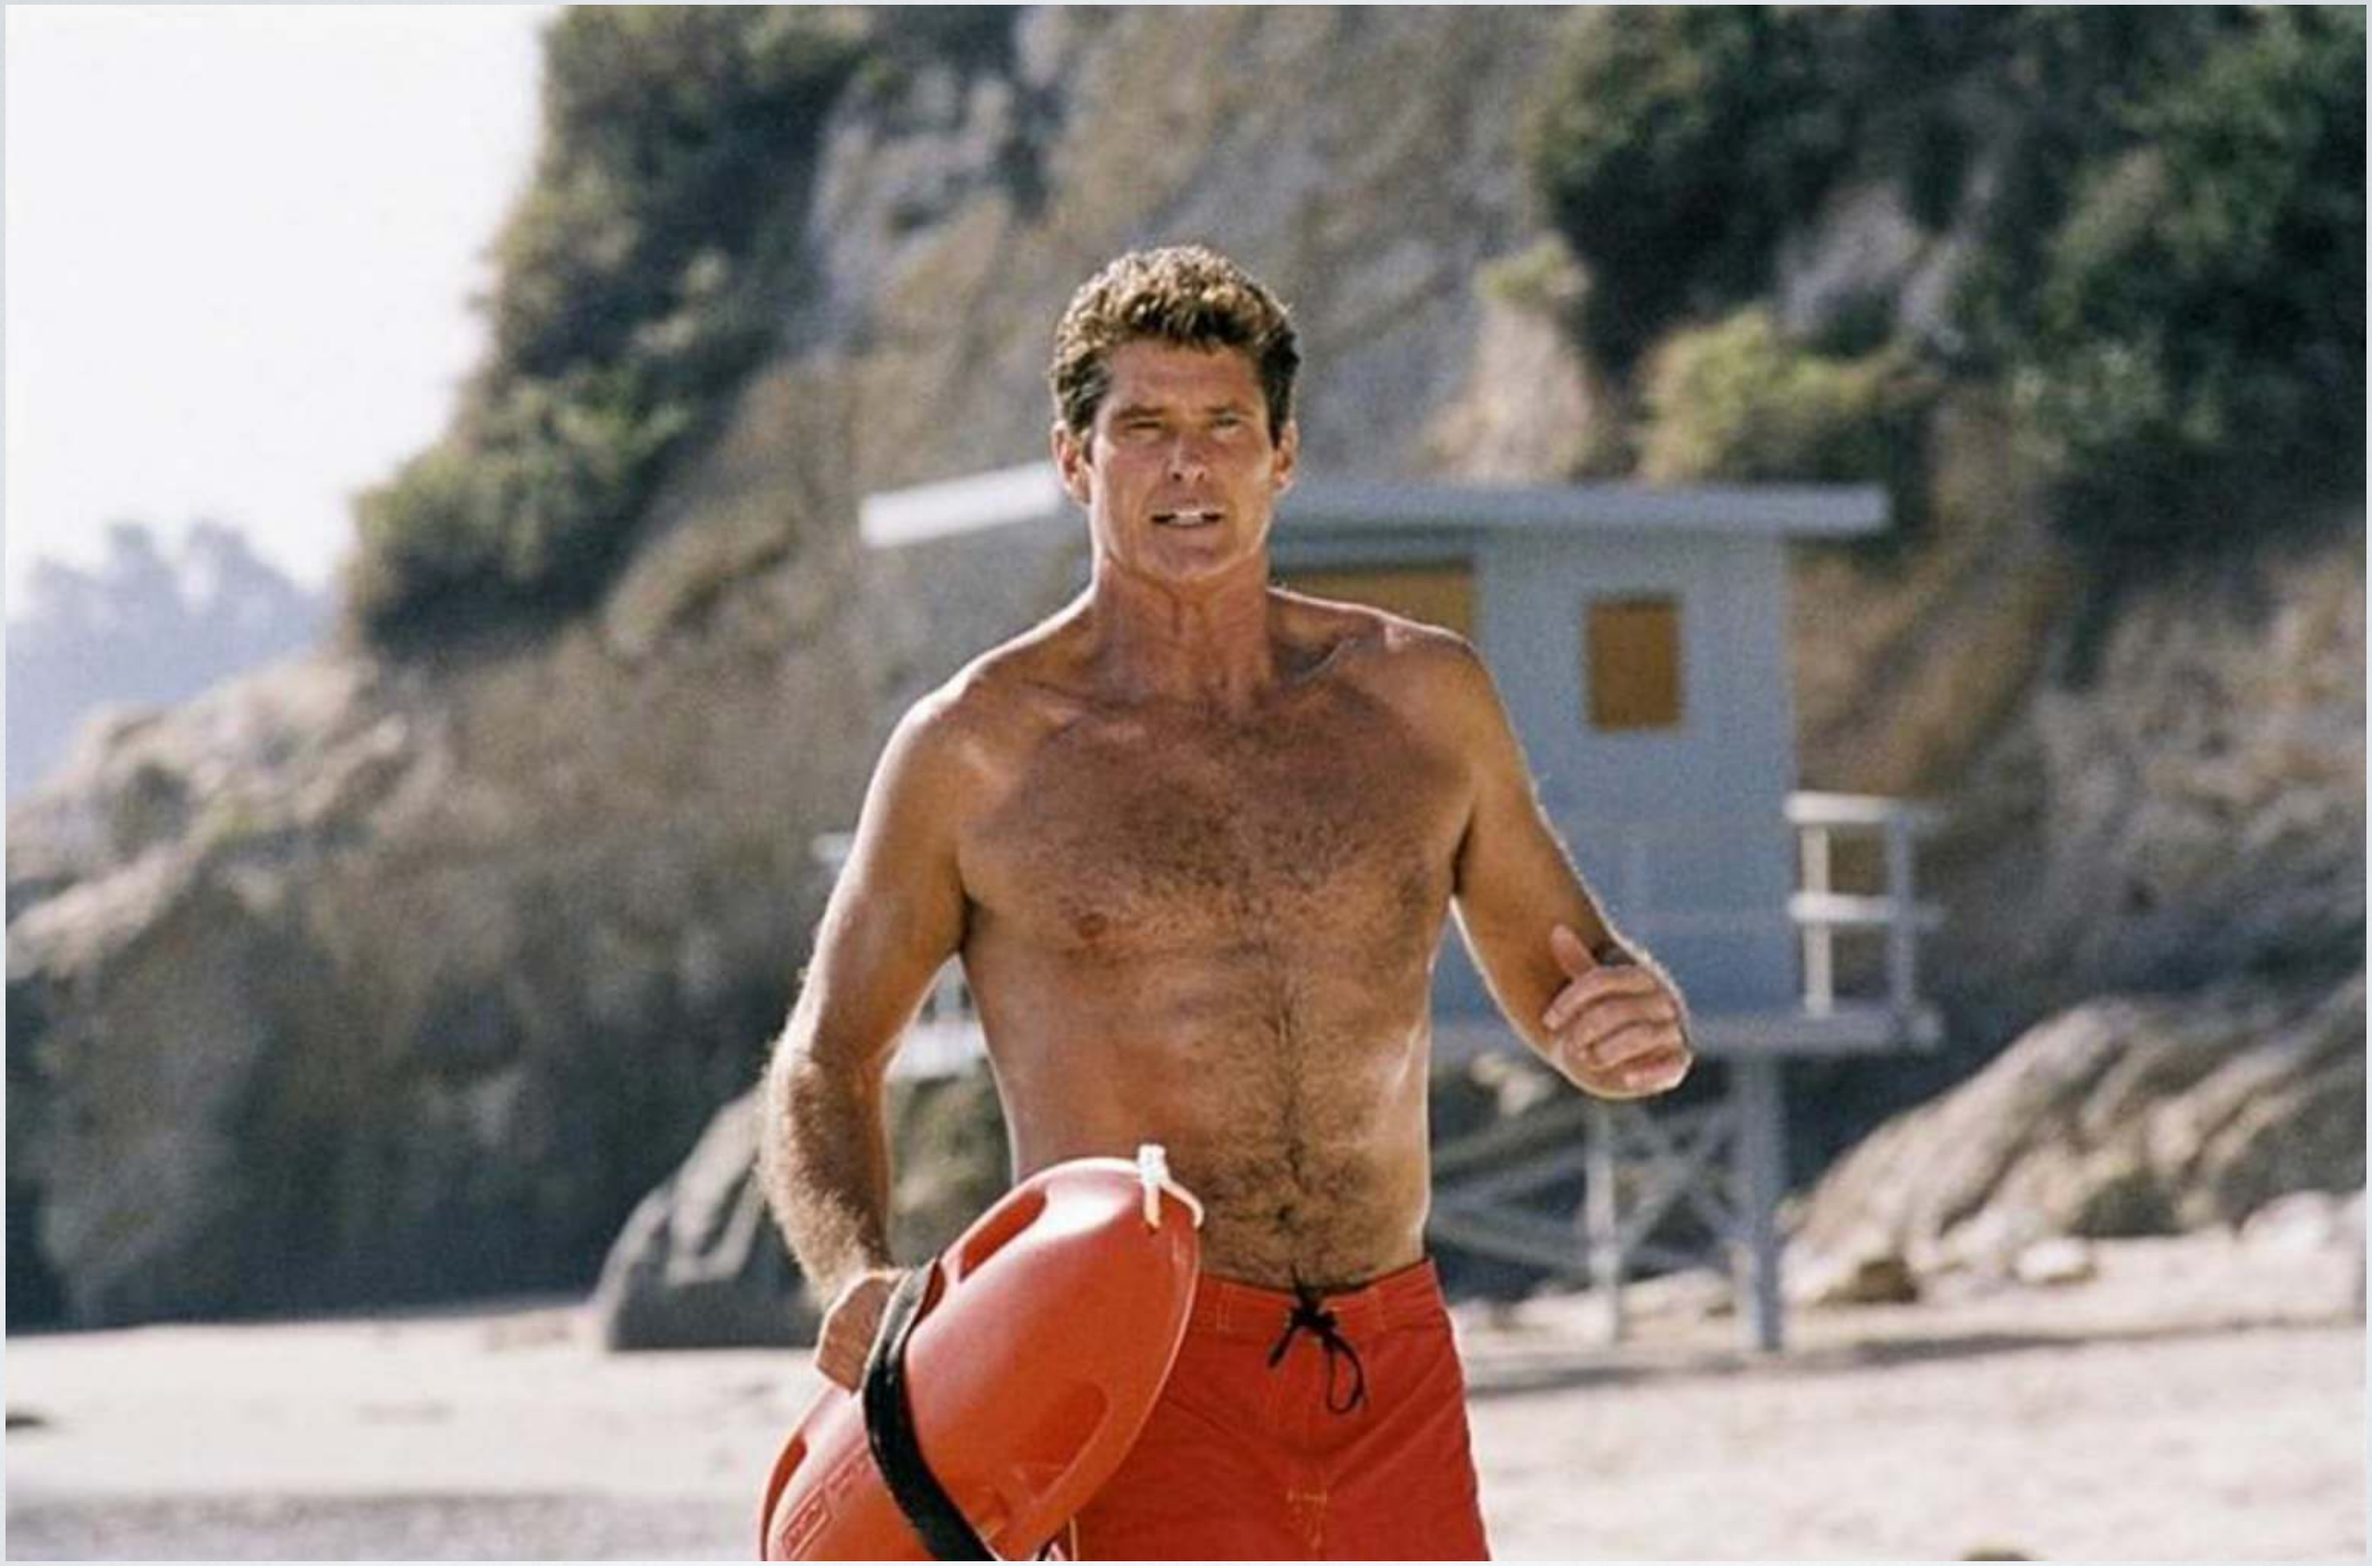

As state-of-art technology can create artificial images that are indistinguishable from real ones, it is urgent to understand whether believing that a picture is real or not has some import over affective phenomena such as sexual arousal. Thus, in two pre-registered online studies, we tested whether 60 images depicting models in underwear elicited higher self-reported sexual arousal when believed to be ($N = 57$) or presented as ($N = 108$) real photographs as opposed to artificially generated. In both cases, Realness correlated with significantly higher scores on self-reported sexual arousal. Consistently with the literature on downregulation of emotional response to fictional works, our result indicates that sexual images that are perceived to be fake are less arousing than those believed to portray real people.

Sulman Mirza
@sulman_mrza

looks like high school level art 101 work, but not even. no cohesion of elements

Ardiel
@RDL0013

The fact that it looks like shit and is shit. Slop. Doesn't look anywhere near like a Monet. Looks exactly like somebody trying to replicate the style and achieving like 20% of it. Not as vibrant as Monet's typical choice of colors. Looks dull.

@egg_oni

I'm disappointed I have to even point it out. There is no cohesion to the depth and color choices. The reflection of the tree bleeds into the lilypads with no regard for spatial depth or contrast. The background lilypad-algae amalgam is egregiously vague, like most AI art.

orb
@ArtofOrb

unlike Monet, your AI model is not painting with advanced myopia and dramatic gusto during a period of artistic rebellion in Paris. inferior.

Certified organic and AI-free: New stamp for human-written books launches

As machine-made books flood online marketplaces, a new UK initiative is introducing an Organic Literature stamp to help readers identify books created by real authors

ERGEBNISSE

- Keine Identifizierbarkeit:
  - Wir können KI Artefakte nicht von menschengemachten unterscheiden.
- Blind-Bevorzugung:
  - Wir bewerten KI Artefakte oft besser als menschliche.
- Wertegefälle:
  - Wir halten (angeblich) KI Artefakte für weniger wertvoll/ästhetisch etc.
  - Was erklärt das KI Wertgefälle?

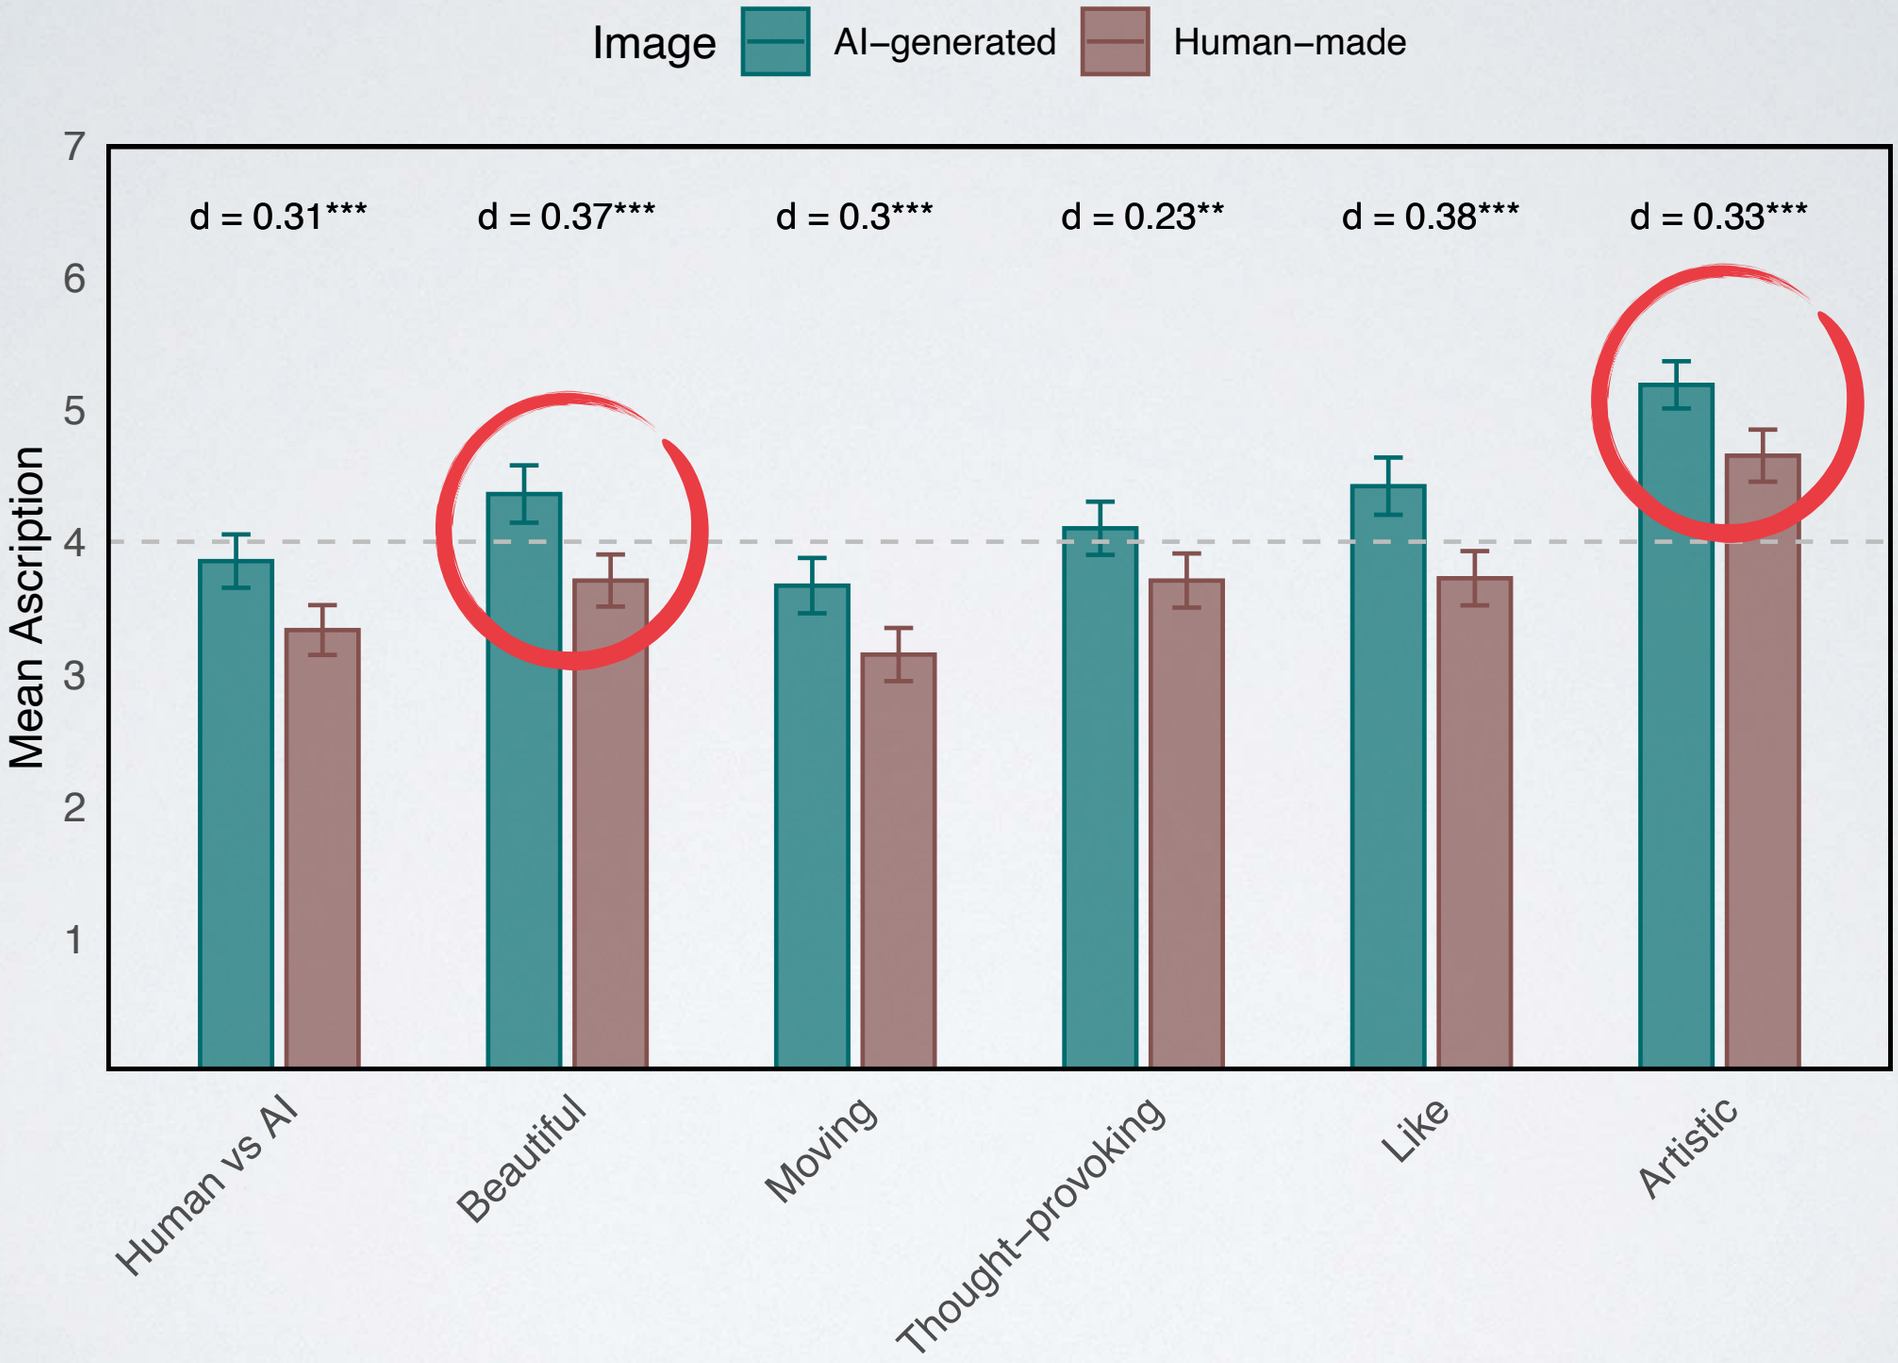

DAS WERTGEFÄLLE

Drei Hypothesen

39’

T1: BIAS THEORIE

- Menschliche Kunst und KI Kunst haben die gleichen Eigenschaften. (Das Werk ist das Werk).
- Das KI Wertegefälle ist ein Urteilsverzerrung/Bias.

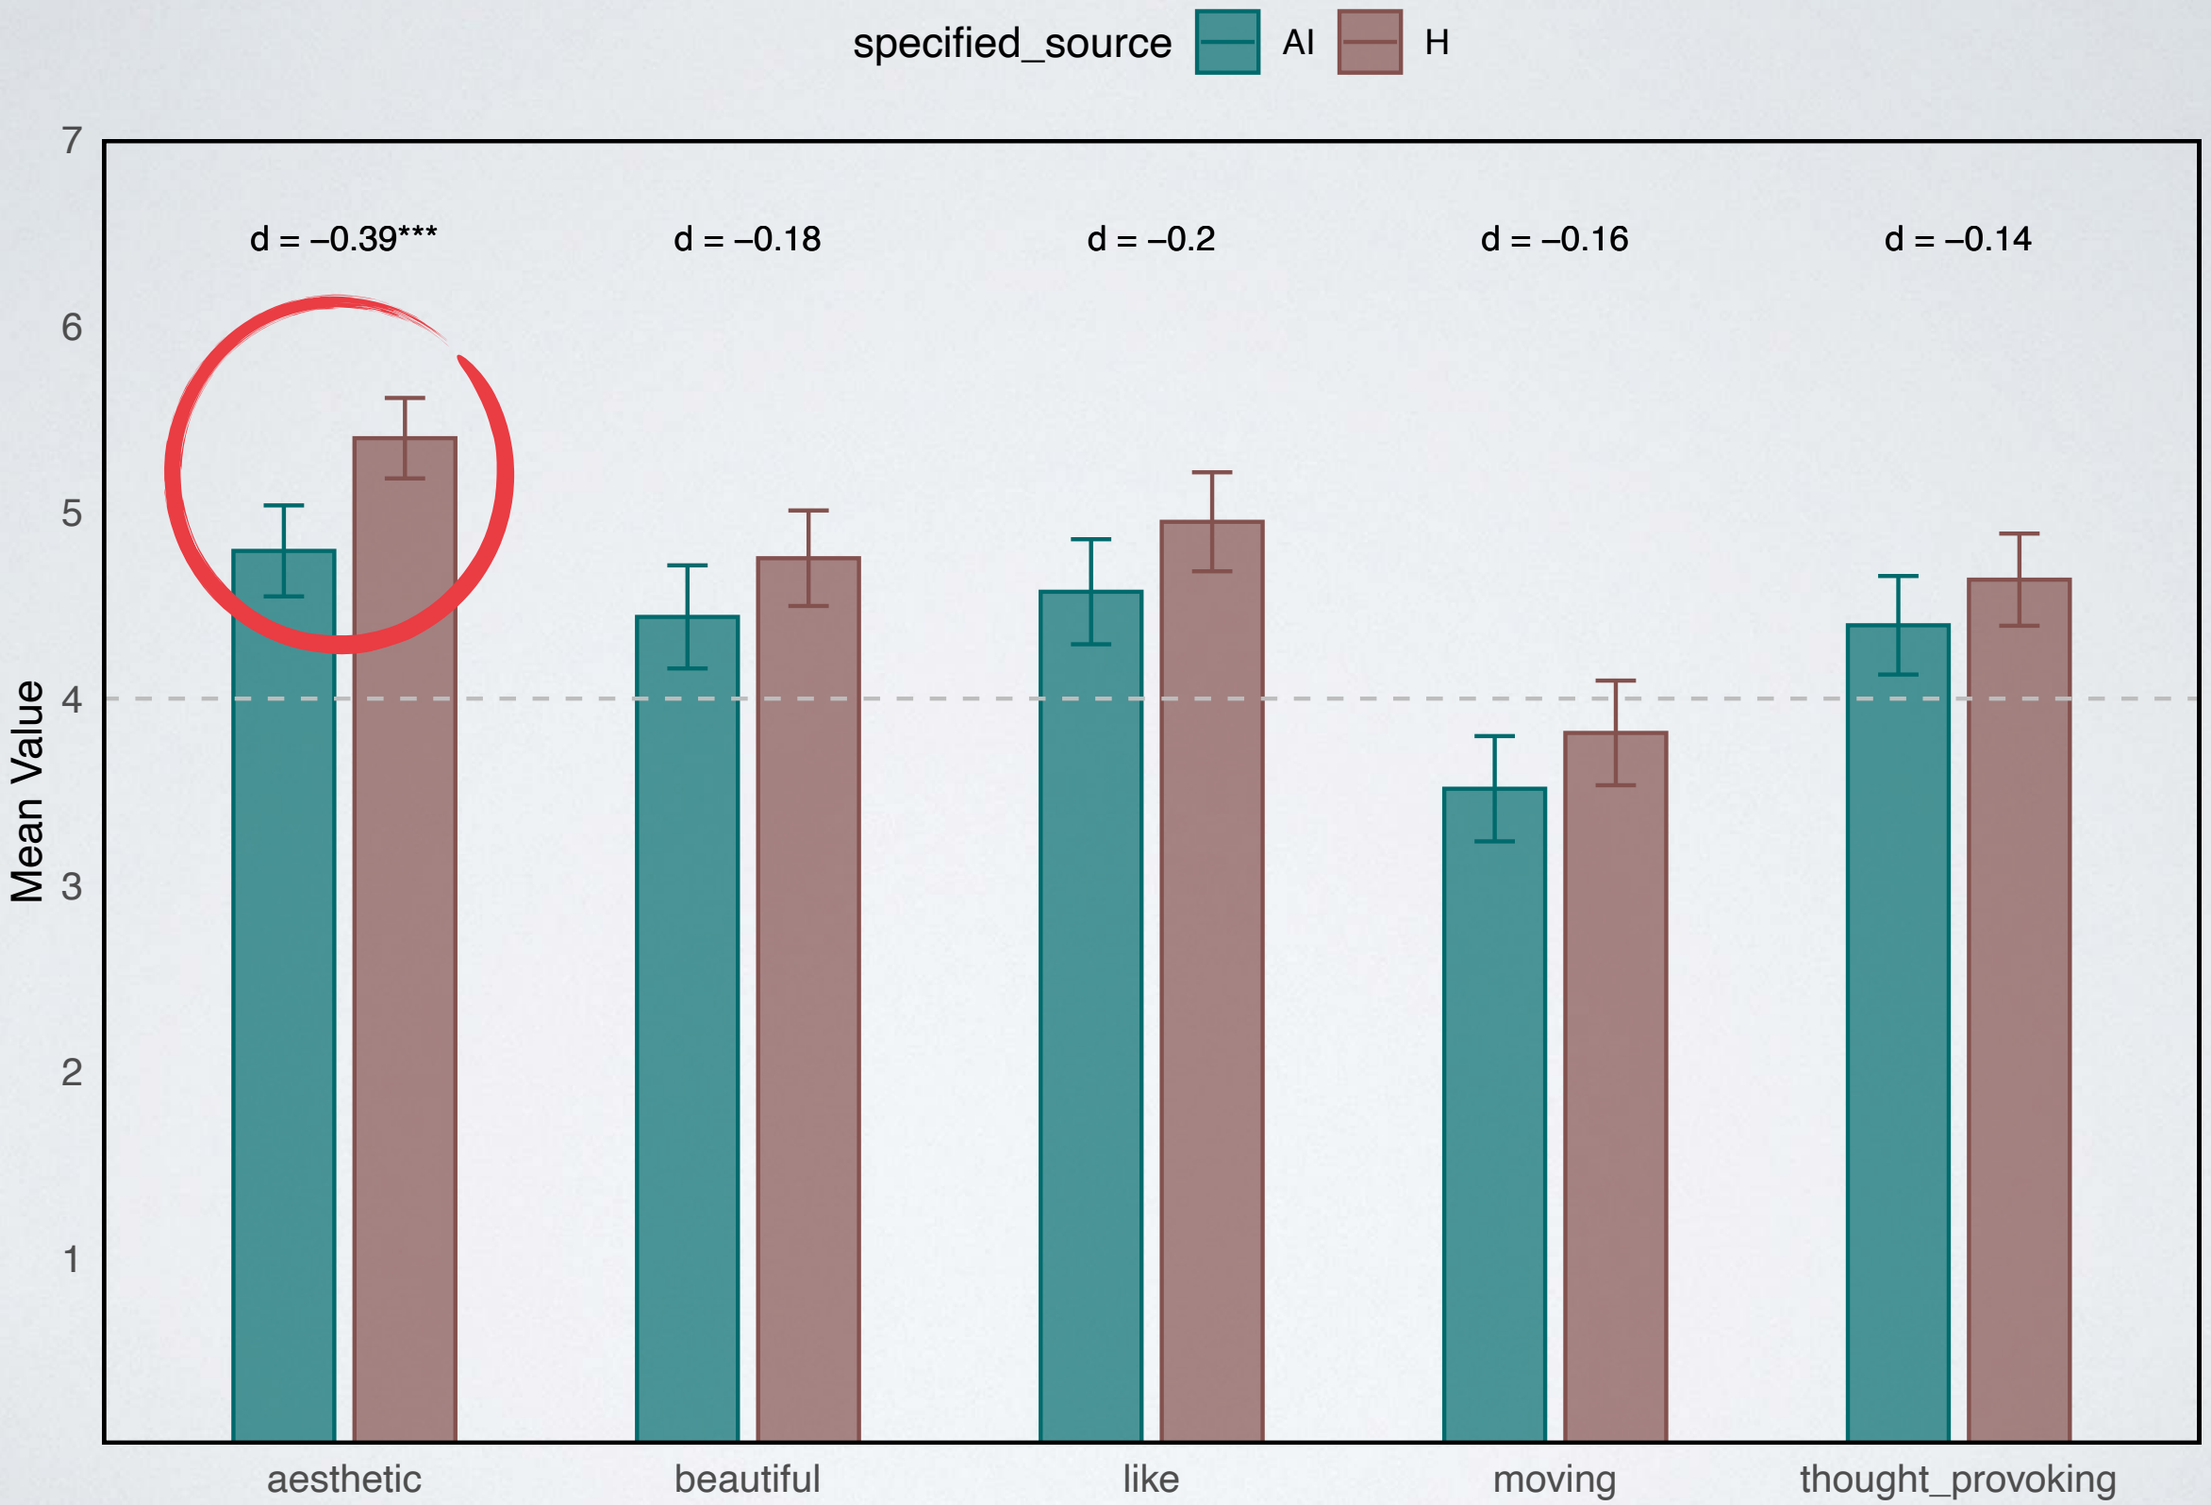

Kneer, M. & Speidel, K. (*in preparation*): Dispositions towards AI art.

T2: INTENTIONALITÄT

- Die künstlerische Intention ist das zentrale Merkmal von Kunst (Levinson, 2006).
- Menschliche Kunst hat künstlerische Intention. KI Kunst (oft) nicht.
- Das KI Wertegefälle ist gerechtfertigt.

Angebliche Provenienz (Bilder identisch)

Kneer, M. & Speidel, K. (*in preparation*): Dispositions towards AI art.

T3:VALUE FORKS

- Kunst und KI Kunst können per se den gleichen ästhetischen Wert haben. Aber:
- In KI Kunst wollen wir andere ästhetische Qualitäten verwirklicht sehen als in menschlicher Kunst: Value Fork.

T3: VALUE FORKS

- Moral: Moralisch richtiges KI Verhalten ist keine bloße Imitation von moralisch richtigem Verhalten des Menschen.
  - Um moralisch zu handeln muss KI oft anders handeln als der Mensch.
- Kunst: Ästhetisch wertvolle KI Kunst ist keine bloße Imitation von ästhetischer menschengemachter Kunst.
  - Um ästhetischen Wert zu haben muss KI Kunst oft anders sein als menschengemachte Kunst.

@kneer
